Specimen Collection and Transport Overview

Proper specimen collection and transport is critical to accurate test results. This guide provides detailed instructions for collecting and transporting various types of specimens, including blood, urine, stool, and respiratory specimens. It covers the correct use of collection devices, storage conditions, and transport requirements to ensure specimen integrity and safety.

Blood Specimens: Collect blood specimens using appropriate collection tubes. For most tests, allow the specimen to clot at room temperature for 30 minutes before centrifugation. For coagulation studies, collect into citrate tubes and invert gently. For chemistry tests, collect into serum separator tubes (SST) and allow to clot.

Urine Specimens: Collect urine specimens using a clean, dry container. For culture, use a sterile container. For chemistry, use a container with a preservative. Collect a midstream clean-catch specimen to avoid contamination.

Stool Specimens: Collect stool specimens using a clean, dry container. For culture, use a sterile container. For chemistry, use a container with a preservative. Collect a fresh specimen and avoid contamination with urine or toilet water.

Respiratory Specimens: Collect respiratory specimens using appropriate collection devices. For sputum, collect a deep cough specimen. For nasopharyngeal aspirates, use a sterile swab. For bronchoalveolar lavage, use a sterile container.

Other Specimens: Collect other specimens such as CSF, synovial fluid, and pleural fluid using appropriate collection devices and containers. Store at 4°C and transport to the lab as soon as possible.

Storage and Transport: Store specimens at the appropriate temperature. Most specimens should be stored at 4°C. Some specimens, such as coagulation studies, should be stored at room temperature. Transport specimens in a cool box with ice packs.

Labeling: Label specimens with the patient's name, date of birth, and the type of specimen. Use a permanent marker and include the test code if applicable.

Documentation: Document the collection and transport of specimens in the patient's medical record. Include the date and time of collection, the type of specimen, and the storage and transport conditions.

Quality Control: Perform quality control tests on specimens to ensure accuracy. Use control materials and compare results to known values.

Safety: Follow safety protocols when handling specimens. Wear gloves and use appropriate disposal methods for biohazardous specimens.

Regulatory Compliance: Ensure compliance with regulatory requirements for specimen collection and transport. Follow local, state, and federal guidelines.

Communication: Communicate with the lab and other healthcare providers regarding specimen collection and transport. Provide clear instructions and answer questions.
