Nonstandard Methods in Ramsey Theory and Combinatorial Number Theory Mauro Di Nasso, Isaac Goldbring, Martino Lupini, 2019-05-23 The goal of this monograph is to give an accessible introduction to nonstandard methods and their applications with an emphasis on combinatorics and Ramsey theory It includes both new nonstandard proofs of classical results and recent developments initially obtained in the nonstandard setting This makes it the first combinatorics focused account of nonstandard methods to be aimed at a general graduate level mathematical audience This book will provide a natural starting point for researchers interested in approaching the rapidly growing literature on combinatorial results obtained via nonstandard methods The primary audience consists of graduate students and specialists in logic and combinatorics who wish to pursue research at the interface between these areas

Monotone Iterative Techniques for Discontinuous Nonlinear Differential Equations Seppo Heikkilä, V. Lakshmikantham, 2017-09-29 Providing the theoretical framework to model phenomena with discontinuous changes this unique reference presents a generalized monotone iterative method in terms of upper and lower solutions appropriate for the study of discontinuous nonlinear differential equations and applies this method to derive suitable fixed point theorems in ordered abstract spaces

Nonstandard Models of Arithmetic and Set Theory Ali Enayat, Roman Kossak, 2004 This is the proceedings of the AMS special session on nonstandard models of arithmetic and set theory held at the Joint Mathematics Meetings in Baltimore MD The volume opens with an essay from Haim Gaifman that probes the concept of non standardness in mathematics and provides a fascinating mix of historical and philosophical insights into the nature of nonstandard

mathematical structures In particular Gaifman compares and contrasts the discovery of nonstandard models with other key mathematical innovations such as the introduction of various number systems the modern concept of function and non Euclidean geometries Other articles in the book present results related to nonstandard models in arithmetic and set theory including a survey of known results on the Turing upper bounds of arithmetic sets and functions The volume is suitable for graduate students and research mathematicians interested in logic especially model theory New Technical Books New York Public Library,1986

A Modular Calculus for the Average Cost of Data Structuring Michel Schellekens,2008-06-17 A Modular Calculus for the Average Cost of Data Structuring introduces MOQA a new domain specific programming language which guarantees the average case time analysis of its programs to be modular Time in this context refers to a broad notion of cost which can be used to estimate the actual running time but also other quantitative information such as power consumption while modularity means that the average time of a program can be easily computed from the times of its constituents something that no programming language of this scope has been able to guarantee so far MOQA principles can be incorporated in any standard programming language MOQA supports tracking of data and their distributions throughout computations based on the notion of random bag preservation This allows a unified approach to average case time analysis and resolves fundamental bottleneck problems in the area The main techniques are illustrated in an accompanying Flash tutorial where the visual nature of this method can provide new teaching ideas for algorithms courses This volume with forewords by Greg Bollella and Dana Scott presents novel programs based on the new advances in this area including the first randomness preserving version of Heapsort Programs are provided along with derivations of their average case time to illustrate the radically different approach to average case timing The automated static timing tool applies the Modular Calculus to extract the average case running time of programs directly from their MOQA code A Modular Calculus for the Average Cost of Data Structuring is designed for a professional audience composed of researchers and practitioners in industry with an interest in algorithmic analysis and also static timing and power analysis areas of growing importance It is also suitable as an advanced level text or reference book for students in computer science electrical engineering and mathematics Michel Schellekens obtained his PhD from Carnegie Mellon University following which he worked as a Marie Curie Fellow at Imperial College London Currently he is an Associate Professor at the Department of Computer Science in University College Cork National University of Ireland Cork where he leads the Centre for Efficiency Oriented Languages CEOL as a Science Foundation Ireland Principal Investigator American Book Publishing Record ,2000 Books in Print Supplement ,1982 Mathematical Reviews ,2006 **Choice** ,1978 **Subject Guide to Books in Print** ,1975 **Monographic Series** Library of Congress, Books in Series ,1979 **The Publishers' Trade List Annual** ,1985 **Mathematics + Physics: Lectures On Recent Results (Volume Ii)** Ludwig Streit,1986-05-01 Contents The Inverse Method in Quantum Mechanics H Grosse An Invitation to Alain Connes Cyclic Cohomology D Kastler Topological Methods in
