Resilience in the Pacific and the Caribbean Simon Hollis, 2020-10-26 This book critically examines the global diffusion and local reception of resilience through the implementation of Disaster Risk Reduction DRR programmes in Pacific and Caribbean island states Global efforts to strengthen local disaster resilience capacities have become a staple of international development activity in recent decades yet the successful implementation of DRR projects designed to strengthen local resilience remains elusive While there are pockets of success a gap remains between global expectations and local realities Through a critical realist study of global and local worldviews of resilience in the Pacific and Caribbean islands this book argues that the global advocacy of DRR remains inadequate because of a failure to prioritise a person orientated ethics in its conceptualization of disaster resilience This regional comparison provides a valuable lens to understand the underlying social structures that makes resilience possible and the extent to which local governments communities and persons interpret and modify their behaviour on risk when faced with the global message on resilience This book will be of much interest to students of resilience risk management development studies and area studies Science and Technology in Nepal

Frey,1992-05-31 This book champions the view that economics is a social science and that moreover it may serve as a new paradigm for the social sciences Economics is taken to be part of those sciences which deal with actual problems of society by providing insights improving our understanding and suggesting solutions I am aware that the way problems are addressed here has little in common with economics as it is generally understood today most economists make strong efforts to imitate the exact sciences Economics tends to become a branch of applied mathematics the majority of all publications in professional journals and books are full of axioms lemmas and proofs and they are much concerned with purely formal deductions Often when the results are translated into verbal language or when they are applied empirically disappointingly little of interest remains The book wants to show that another type of economics exists which is surprisingly little known This type of economics has its own particular point of view It centres on a concept of man or a model of human behaviour which differs from those normally used in other social sciences such as sociology political science law or psychology I do not how ever claim that economics is the only legitimate social science On the vii viii PREFACE contrary economics can provide useful insights only in collaboration with the other social sciences an aspect which has been disregarded by mathematically oriented economics
