Manufacturing Processes and Materials, Fourth Edition George F. Schrader,Ahmad K. Elshennawy,2000 This best selling textbook for major manufacturing engineering programs across the country masterfully covers the basic processes and machinery used in the job shop tool room or small manufacturing facility At the same time it describes advanced equipment and processes used in larger production environments Questions and problems at the end of each chapter can be used as self tests or assignments An Instructor s Guide is available to tailor a more structured learning experience Additional resources from

SME including the Fundamental Manufacturing Processes videotape series can also be used to supplement the book's learning objectives. With 31 chapters, 45 tables, 586 illustrations, 141 equations, and an extensive index, *Manufacturing Processes: Materials* is one of the most comprehensive texts available on this subject.

Introduction to Manufacturing Processes Mikell P. Groover, 2012-04-13 Mikell Groover, author of the leading text in manufacturing processes, has developed *Introduction to Manufacturing Processes* as a more navigable and student-friendly text paired with a strong suite of additional tools and resources online to help instructors drive positive student outcomes. Focusing mainly on processes, tailoring down the typical coverage of both materials and systems, the emphasis on manufacturing science and mathematical modeling of processes is an important attribute of the new book. Real-world design case studies are also integrated with fundamentals; process videos provide students with a chance to experience being on the floor in a manufacturing facility, followed by case studies that provide individual students or groups of students to dig into larger, more design-oriented problems.

Manufacturing Engineering Processes, Second Edition, Altung, 1993-11-23 Responding to the need for an integrated approach in manufacturing engineering oriented toward practical problem solving, this updated second edition describes a process morphology based on fundamental elements that can be applied to all manufacturing methods, providing a framework for classifying processes into major families with a common theoretical foundation. This work presents time-saving summaries of the various processing methods in data sheet form, permitting quick surveys for the production of specific components. Delineating the actual level of computer applications in manufacturing, this work creates the basis for synthesizing process development, tool and die design, and the design of production machinery. Details of the product life cycle approach in manufacturing, emphasizing environmental, occupational health, and resource impact consequences, introduces process planning and scheduling as an important part of industrial manufacturing. Contains a completely revised and expanded section on ceramics and composites, furnishes new information on welding, arc formation, and maintenance, addresses the issue of industrial safety, and discusses progress in non-conventional processes such as laser processing, layer manufacturing, electrical discharge, electron beam, abrasive jet, ultrasonic, and electrochemical machining. Revealing how manufacturing methods are adapted in industry practices, this work is intended for use by students of manufacturing engineering, industrial engineering, and engineering design, and also for use as a self-study guide by manufacturing mechanical materials, industrial, and design engineers.
