Practice and Experience Feng Bao, Liqun Chen, Robert H. Deng, Guojun Wang, 2016-11-02 This book constitutes the proceedings of the 12th International Conference on Information Security and Practice and Experience ISPEC 2016 held in Zhangjiajie China in November 2016 The 25 papers presented in this volume were carefully reviewed and selected from 75 submissions They cover multiple topics in information security from technologies to systems and applications **Knowledge**

Based Computer Systems S. Ramani, R. Chandrasekar, K.S.R. Anjaneyulu, 1990-07-24 This volume presents selected papers from KBCS 89 which is the second in a series of annual conferences hosted by the Knowledge Based Computer Systems Project funded by the Government of India with United Nations assistance The papers are grouped into sections including AI applications computer architecture and parallel processing expert systems intelligent tutoring systems knowledge representation logic programming natural language understanding pattern recognition reasoning search activities at the KBCS Nodal Centres **Dynamic Profile of Switched-Mode Converter** Teuvo Suntio, 2009-04-13 This book collates the

information available on this topic hitherto only to be found in journals and at conferences It presents the fundamentals and advances in average and small signal modeling of switched mode converters before applying this information to generate a real canonical converter model Practical examples are scattered throughout the text and experimental evidence is cited to support theoretical findings The result is a solid basis for understanding and utilizing the dynamics of switched mode converters for the first time in their 40 year history **Modeling of Physical Systems** Joseph J. Beaman, Raul G.

Longoria, 2025-06-03 Introductory text on nonlinear and continuous time dynamic systems using bond graph methodology to enable readers to develop and apply physical system models Through an integrated and uniform approach to system modeling analysis and control Modeling of Physical Systems uses realistic examples to link empirical analytical and numerical approaches and provide readers with the essential foundation needed to move towards more advanced topics in systems engineering Rather than use only a linear modeling methodology this book also incorporates nonlinear modeling approaches The authors approach the topic using bond graph methodology a well known and highly effective method for the modeling and analysis of multi energy domain systems at the physical level With a strong focus on fundamentals this book begins by reviewing core topics which engineering students will have been exposed to in their first two years of study It then expands into introducing systematic model development using a bond graph approach Later chapters expand on the

fundamental understanding of systems with insights regarding how to make decisions on what to model and how much complexity is needed for a particular problem

Written by two professors with nearly a century of combined research and industry experience *Modeling of Physical Systems* explores topics including Basic Kirchoff systems covering mechanical translation and rotation electrical hydraulic and thermal systems and ideal couplers A complete introduction to bond graph methods and their application to practical engineering system modeling Computer based analysis and simulation covering algebraic analysis of system equation and semi analytical analysis for linear system response Multiport fields distributed systems and transmission elements covering heat and magnetism power lines and wave propagation modeling with W and H Lines Signal and power in measurement and control covering derivative control and effect of feedback *Modeling of Physical Systems* is an essential learning resource for mechanical mechatronics and aerospace engineering students at the graduate and senior graduate level The text is also valuable for professional engineers and researchers controls engineers and computer scientists seeking an understanding of engineering system modeling

Fuzzy Logic G. Gerla, 2013-03-09 Fuzzy logic in narrow sense is a promising new chapter of formal logic whose basic ideas were formulated by Lotfi Zadeh see Zadeh 1975 a The aim of this theory is to formalize the approximate reasoning we use in everyday life the object of investigation being the human aptitude to manage vague properties as for example beautiful small plausible believable etc that by their own nature can be satisfied to a degree different from 0 false and 1 true It is worth noting that the traditional deductive framework in many valued logic is different from the one adopted in this book for fuzzy logic in the former logics one always uses a crisp deduction apparatus producing crisp sets of formulas the formulas that are considered logically valid By contrast fuzzy logical deductive machinery is devised to produce a fuzzy set of formulas the theorems from a fuzzy set of formulas the hypotheses Approximate reasoning has generated a very interesting literature in recent years However in spite of several basic results in our opinion we are still far from a satisfactory setting of this very hard and mysterious subject The aim of this book is to furnish some theoretical devices and to sketch a general framework for fuzzy logic This is also in accordance with the non Fregean attitude of the book

The Friend, 1867 Future Vision and Trends on Shapes, Geometry and Algebra Raffaele de Amicis, Giuseppe Conti, 2014-06-13 Mathematical algorithms are a fundamental component of Computer Aided Design and Manufacturing CAD CAM systems This book provides a bridge between algebraic geometry and geometric modelling algorithms formulated within a computer science framework Apart from the algebraic geometry topics covered the entire book is based on the unifying concept of using algebraic techniques properly specialized to solve geometric problems to seriously improve accuracy robustness and efficiency of CAD systems It provides new approaches as well as industrial applications to deform surfaces when animating virtual characters to automatically compare images of handwritten signatures and to improve control of NC machines This book further introduces a noteworthy representation based on 2D contours which is essential to model the metal sheet in industrial processes It additionally reviews applications of numerical

algebraic geometry to differential equations systems with multiple solutions and bifurcations Future Vision and Trends on Shapes Geometry and Algebra is aimed specialists in the area of mathematics and computer science on the one hand and on the other hand at those who want to become familiar with the practical application of algebraic geometry and geometric modelling such as students researchers and doctorates
