**Leading issues in development economics: selected materials and commentary. Leading issues in economic development. Studies in international poverty. Second edition** Gerald M. Meier, 1970 **Leading issues in development economics. Leading issues in economic development. Studies in international poverty. Second edition** Gerald M. Meier, 1970 **Leading Issues in Development Economics** Gerald M. Meier, 1967 *Economic Development* Michael P. Todaro, 1994 *Economic Development, Growth and Welfare* Charles Smith, 1994 Covers the major issues of economic development including Third World debt income distribution and environmental problems [Development Economics : From the Poverty to the Wealth of Nations](#) Yujiro Hayami, 2001-02-15 A comprehensive and systematic account of the core topics in development economics this book examines the reasons why a few countries have achieved a high level of affluence while the majority remain poor and stagnant It represents an original combination of classical political economy modern institutional theory and current development issues bound together through the East Asian development experience This fully revised second edition also analyses some recent changes and newly emerged problems relevant to the global economy This textbook provides a comprehensive systematic treatise on development economics combining classical political economy modern institutional theory and current development issues It has grown out of thirty years experience of teaching undergraduate and postgraduate students in the United States Japan and other parts of Asia The treatment is global although the organizing principle is the East Asian development experience Quantitative characteristics of Third World development in terms of population growth natural resource depletion capital accumulation and technological change are outlined but the central

approach is comparative institutional analysis Development Economics addresses one major question Why has a small set of countries achieved a high level of affluence while the majority remain poor and stagnant Why in turn has the number of developing economies set on the track of closing their productivity gap with advanced economies been so limited One obvious factor underlying this global divergence is unevenness in the ability to adopt and develop advanced technology due in large measure to the difficulty experienced by low income economies in preparing appropriate institutions for borrowing advanced technology given their social and cultural constraints The major task of this volume is to explore the nature of these binding constraints with the aim of identifying the means to remove them Comparisons are made with countries where the constraints have been successfully lifted most notably Japan and East Asian NIEs This fully revised and updated second edition also incorporates analyses of several recent changes and newly emerged problems relevant to the global economy the 1997-98 financial crisis in East Asia the Kyoto Protocol signed in 1997 at the Third Conference of Parties for the United Nations Framework Convention on Climate Change and the deceleration in growth of agricultural productivity in Asia Exploration of these issues provides important lessons on how to sustain economic growth based on technology borrowing

economic growth in developing countries have become more and more evident in recent years The search for development paths that lead to growth with equality all too difficult to find is now an area of central concern for development economists One result of their concern is this volume in which internationally known representatives of a range of disciplines address themselves to ways in which growth with equity might be successfully achieved The book begins with both empirical and theoretical background to the development issues involved and with an overview of the experience of the international development assistance community focuses on operational definitions of the poor that will permit analytical policy oriented research to lead to useful conclusions Specific concern is expressed for small business owners women peasants and recent migrants from rural to urban areas The basic question of course is what can be done about poverty and inequality includes suggestions for specific measures and provides a comprehensive comparison across a wide range of policy options The book does not solve the problem but it does point to directions that promise a reasonably high probability of success And throughout suggestions are made for the kind of interdisciplinary research required to raise that probability even further
