Doran, 2012-04-23 This welcome new edition discusses bioprocess engineering from the perspective of biology students. It includes a great deal of new material and has been extensively revised and expanded. These updates strengthen the book and maintain its position as the book of choice for senior undergraduates and graduates seeking to move from biochemistry, microbiology, molecular biology to bioprocess engineering. All chapters thoroughly revised for current developments with over 200 pgs of new material including significant new content in Metabolic Engineering, Sustainable Bioprocessing, Membrane Filtration, Turbulence and Impeller Design, Downstream Processing, Oxygen Transfer Systems. Over 150 new problems and worked examples. More than 100 new illustrations.

Bioprocess Engineering Principles Pauline M. Doran, 2013 The emergence and refinement of techniques in molecular biology has changed our perceptions of medicine, agriculture, and environmental management. This textbook presents the principles of bioprocess engineering in a way that is accessible to biological scientists.

Fundamentals of Modern Bioprocessing Sarfaraz K. Niazi, Justin L. Brown, 2017-07-27 Biological drug and vaccine manufacturing has quickly become one of the highest value fields of bioprocess engineering and many bioprocess engineers are now finding job opportunities that have traditionally gone to chemical engineers. *Fundamentals of Modern Bioprocessing* addresses this growing demand. Written by experts well established in the field, this book connects the principles and applications of bioprocessing engineering to healthcare product manufacturing and expands on areas of opportunity for qualified bioprocess engineers and students. The book is divided into two sections: the first half centers on the engineering fundamentals of bioprocessing, while the second half serves as a handbook offering advice and practical applications. Focused on the fundamental principles at the core of this discipline, this work outlines every facet of design, component selection, and regulatory concerns. It discusses the purpose of bioprocessing to produce products suitable for human use, describes the manufacturing technologies related to bioprocessing, and explores the rapid expansion of bioprocess engineering applications relevant to health care product manufacturing. It also considers the future of bioprocessing, the use of disposable components, which is the fastest growing area in the field of bioprocessing to replace traditional stainless steel. In addition, this text discusses the many types of genetically modified organisms, outlines laboratory techniques, includes the most recent developments, serves as a reference, and contains an extensive bibliography. Emphasizes biological manufacturing using recombinant processing, which begins with creating a genetically modified organism using recombinant techniques. *Fundamentals of Modern Bioprocessing* outlines both the principles and applications of bioprocessing engineering related to healthcare product manufacturing. It lays out the basic concepts, definitions, methods, and applications of bioprocessing. A single volume, comprehensive reference developed to meet the needs of students with a bioprocessing background, it can also be used as a source for professionals in the field.

Hollow Fiber Membranes Tai-Shung

Chung, Yingnan Feng, 2021-03-16 *Hollow Fiber Membranes Fabrication and Applications* focuses on the fabrication and applications of hollow fiber membranes. The book amply discusses the fundamental theories and practical applications of hollow fiber membranes covering membrane formation mechanisms, hollow fiber spinning techniques and spinneret design and module fabrication. In addition, novel membrane processes and applications of hollow fiber membranes are introduced. Elaborates membrane formation mechanisms. Illustrates novel hollow fiber fabrication techniques and processes. Specifies practical spinneret design and module fabrication. Reviews hollow fiber membranes spun from specialty polymers. Discusses state of the art hollow fiber membrane applications. *Encyclopedia of Agricultural, Food, and Biological Engineering*

Dennis R. Heldman, Carmen I. Moraru, 2010-10-21 *Examining the role of engineering in delivery of quality consumer products* this expansive resource covers the development and design of procedures, equipment and systems utilized in the production and conversion of raw materials into food and nonfood consumer goods. With nearly 2000 photographs, figures, tables and equations including 128 color figures, the book emphasizes and illustrates the various engineering processes associated with the production of materials with agricultural origin. With contributions from more than 350 experts and featuring more than 200 entries and 3600 references, this is the largest and most comprehensive guide on raw production technology. **Current**

Developments in Biotechnology and Bioengineering Mohammad Taherzadeh, Jorge Ferreira, Ashok Pandey, 2022-11-18 *Filamentous Fungi Biorefinery* the latest release in the *Current Developments in Biotechnology and Bioengineering* series builds on knowledge on the classification of filamentous fungi and presence and roles played in ecosystems. The importance of filamentous fungi is then further corroborated through a description of their present applications in biotechnological processes. Knowledge on fungal biology is extended through discussion on structure and composition together with a description of growth potentialities of filamentous fungi in on a wide range of substrates. In addition, the morphology of filamentous fungi is then described and its implications during integration in industrial processes is discussed. The book then provides an overview on the use of filamentous fungi for the production of a wide range of value added products including feed and food products, alcohols, organic acids, pigments, enzymes, antibiotics and biopolymers. All provided state of arts are extended to a description of the present degree of application of filamentous fungi towards the production of those products using low value substrates, identification of research gaps and proposes future research avenues. Presents the first book dedicated to the use of filamentous fungi for process development within waste management. Discusses the transfer of research knowledge into industrial processes and marketable products. Includes industrial applications of filamentous fungi towards valorization of low value substrates. Provides up to date knowledge on research and application fields that can benefit from the integration of filamentous fungi. *Australian National Bibliography*, 1997-11 *Green Technologies for Wastewater Treatment and Bioenergy Production*

Imran Ahmad, 2025-03-28 Currently most of the physical and chemical technologies generally employed for the treatment of wastewater are costly and inefficient. Researchers have been working to

find green technologies for the sustainable and economically viable treatment methods for wastewater and Green Technologies for Wastewater Treatment and Bioenergy Production focuses on these latest advancements These include bioremediation bioaugmentation wetlands and algal treatment technologies which are considered to contribute toward a circular bioeconomy and to be crucial in attaining various sustainable development goals Examines the production of biofuels and other forms of bioenergy derived from wastewater Explains how these emerging green technologies contribute toward a circular bioeconomy and aid in achieving various sustainable development goals
