Design and Development of a Secure, Privacy Preserving, and Scalable Blockchain Framework Randhir

Kumar,2023-08-23 Doctoral Thesis Dissertation from the year 2021 in the subject Computer Science IT Security grade A language English abstract Blockchain is an emerging technology leveraged with features of decentralization tamper proof records storage model based on a Peer to Peer architecture It has been mostly applied in financial applications and extended to various applications viz healthcare supply chain and identity management However privacy security and scalability are the key challenges in blockchain based applications that immensely limit the extensive adoption of these extended applications The work in this thesis addresses the aforementioned challenges while preserving better privacy security and scalability in blockchain based applications We propose access control techniques to facilitate better privacy security in the blockchain network and improve scalability off chain storage model First we propose an access control technique to preserve privacy across the blockchain network such that authorized peers can access the resources Initially the access control technique is designed for resource privacy Further we extend the policy to preserve privacy in blockchain network by categorizing both peers and resources In this thesis we also address another important problem i e scalability in blockchain network while storing large size of data in secure off chain storage We use a secure distributed off chain storage model to address the problem of scalability based on the structure of the blockchain network Lastly we propose two level of privacy preservation approach in blockchain network while maintaining the scalability in the network The proposed approach uses BlockCloud BlockFog structure for deployment and IPFS based off chain storage model for large size data storage All the proposed frameworks are evaluated using real world data sets
