Microbial Enzyme Technology in Food Applications Ramesh C. Ray,Cristina M. Rosell,2017-03-27 The aim of food processing is to produce food that is palatable and tastes good extend its shelf life increase the variety and maintain the nutritional and healthcare quality of food To achieve favorable processing conditions and for the safety of the food to be consumed use of food grade microbial enzymes or microbes being the natural biocatalysts is imperative This book discusses the uses of enzymes in conventional and non conventional food and beverage processing as

well as in dairy processing brewing bakery and wine making Apart from conventional uses the development of bioprocessing tools and techniques have significantly expanded the potential for extensive application of enzymes such as in production of bioactive peptides oligosaccharides and lipids flavor and colorants Some of these developments include extended use of the biocatalysts as immobilized encapsulated enzymes microbes both natural and genetically modified as sources for bulk enzymes solid state fermentation technology for enzyme production Extremophiles and marine microorganisms are another source of food grade enzymes The book throws light on potential applications of microbial enzymes to expand the base of food processing industries *Enzymes and Food Processing* G. G. Birch, N. Blakebrough, K. J. Parker, 2012-12-06 R S SHALLENBERGER Cornell University New York State Agricultural Research Station New York USA Among the material to be discussed in this first section of the Enzymes and Food Processing Symposium is subject matter that can be viewed as a marriage between enzyme technology and sugar stereochemistry In order to bring the significance of the material to be presented into proper perspective I would like you to pretend for a moment that you are a researcher making a proposal on this subject to a Research Granting Agency in order to obtain financial support for your ideas However the year is 1880 Under the objectives section of your proposal you state that you intend to attach the intangible vital force or spirit that is the catalyst unique to the chemistry of living organisms to an inert substrate such as sand Thereafter you will pass a solution of right handed glucose also known as starch sugar past the vital force and in the process convert it to left handed glucose also known as fruit sugar The peer review committee would probably reject the proposal as sheer nonsense because the statements made were not only contrary to their experience but also contrary to what they had been taught Perhaps a few select people would have some feeling for what you were talking about but commiseration would be the only form of support that they could offer **Food Processing Enzymes** Nicholas D.
