1 Module 1: TCP/IP Architecture

Exercise 1.9 1. Consider the transparency “Nagle’s Algorithm: Example”. Assume that the packet at line 4 is lost in the network. Give a possible continuation of the message chart.

Solution: In the hypothesis that the override timer is bigger than the retransmission timer, we have **repackettization**: at the retransmission timeout the lost bits are retransmitted, together with the bits arrived in the meantime. In this case Nagle’s algorithm does not come into play.

1

2. Assume Nagle’s algorithm is disabled for a given connection. Is it possible that some data written by the application is still delayed? Prove your answer.
