Luginsky, 2013-06-29 The purpose of this Dictionary

published jointly by Kluwer Technische Boeken BV Deventer The Netherlands and Russky yazyk Publishers Moscow USSR is to help the user read and translate English German French Dutch and Russian texts in electrical engineering. Up until now all such dictionaries were containing terms pertaining directly to electrical engineering plus the terminology used in its off sheets which have evolved into separate disciplines such as communications electronics automation etc. Foremost however this Dictionary represents the terminology of electrical engineering while the branches are represented by their basic terms only. Given the relative small volume about 8000 terms the authors tried to reflect the most important terms in such areas as the circuit theory electric and magnetic measurements electric power generation transmission and distribution as well as the industrial and domestic consumption of electric power. The Dictionary also contains many terms relevant to high voltage technology electrical machines and apparatus electric drive as well as to the elements and structures of aerial and cable transmission lines. In selecting English terms the authors were trying to reflect both their British and American versions although they did not attempt to present all terminological synonyms of this kind. In some cases the Dictionary provides the main spelling versions.
