

Closing Paper Plasmid DNA Using Restriction Enzyme

In this exercise you will use paper to simulate the cloning of a gene from one organism into a bacterial plasmid using a restriction enzyme digest. The plasmid (*puc18* plasmid) can then be used to transform bacteria so that it now expresses a new gene and produces a new protein.

1. From the white paper, cut out the *puc18* plasmid DNA in a long strip.

AAATCGTTGC

2. Attach the ends together to make a loop to simulate the circular DNA of a plasmid.
3. From the green paper, cut out the jellyfish *Glo* gene DNA in a long strip. Leave it as a straight strip. (This is a gene from a vertebrate not a bacterium, so it is not circular.)

GGATCGAAAGC

The *start* and *stop* sequences for transcribing the jellyfish *GFP* or *Glo* gene are highlighted. These are needed to transcribe the gene properly when it is read.

In addition, the *Hind*III & *Eco*R1 restriction enzyme cutting sites (sequences of bases) are marked in **bold** on the jellyfish *Glo* gene DNA. The two restriction enzymes and their respective restriction sites are listed below. These enzymes act as "molecular scissors" to cut the DNA at these sequences in the DNA:

The Recombinant University Doogab Yi, 2015-03-23 This title examines the history of biotechnology when it was new especially when synonymous with recombinant DNA technology It focuses on the academic community in the San Francisco Bay Area where recombinant DNA technology was developed and adopted as the first major commercial technology for genetic engineering at Stanford in the 1970s The book argues that biotechnology was initially a hybrid creation of academic and commercial institutions held together by the assumption of a positive relationship between private ownership and the public interest

Swamy, 2008 *Addison-Wesley Biology* Addison Wesley, 1996-04 *History of Chemoattractant Research* Bernhard Moser, 2016-01-07 In the Research Topic *History of Chemoattractant Research* we will portray some of the key discoveries that helped to transform cell migration research into a global playing field within immunology and beyond Early progress had a profound effect on both academia and industry Today numerous academic laboratories are fully engaged in compiling a detailed road map describing the highly complex network of immune and tissue cells that respond to chemoattractants Industrial research on the other hand centers on drugs that interfere with immune cell traffic in

inflammatory diseases and cancer The following series of short stories provide personal accounts on key discoveries The individual molecular discoveries enabled numerous research laboratories worldwide to unravel their significance in steady state or pathological immune processes Although ground breaking in their own right it is therefore worth emphasizing that rapid progress in chemoattractant research was made possible by many other laboratories who were not directly involved in the original discovery process Therefore the authors of this mini series are discussing their findings in the context of time place and subsequent progress enabled by their discoveries It is hoped that a wide readership will find these accounts entertaining as well as educational although those who wish to gain a more detailed knowledge are referred to the many outstanding reviews on chemokines and other chemoattractants

The Evolution of Biotechnology Martina Newell-McGloughlin, Edward Re, 2007-05-04 Biotechnology in the broadest sense can trace its roots back to prehistory This book is not intended to be a comprehensive history of the technology from some arbitrary point in time or even a chronological tracing of the evolution of that technology but rather my impression of the various events throughout history that have intersected or built on one another to lead to the forward progression of a technology Obviously with such a broad canvas much selectivity is involved in the choices made to advance the narrative and while the subjects chosen are not capricious they are influenced by the author's perspective In addition I have made some attempt where validated resources exist to present my perspective on how individual personalities and their particular contextual experience influenced the direction in which they carried the science or the science carried them The book is divided into an introduction and five chapters which this author views as one of the many possible delineations that could be employed to trace the progress of the technology The introduction gives a broad overview of the technology the components covered progression of the science present applications and future prospects Chapter one covers the prehistory which of its essence involves some conjecture in addition to supported data There are many potential starting points but I choose our agricultural roots since as noted anthropologist Solomon Katz asserts the domestication of plant and animals presaged civilization
