Routledge International Handbook of Schools and Schooling in Asia Kerry J. Kennedy, John Chi-Kin

Lee, 2018-05-11 This comprehensive handbook is the ultimate reference work providing authoritative and international overviews of all aspects of schools and schooling in Asia. Split into 19 sections, it covers curriculum, learning and assessment, private supplementary tutoring, special education, gender issues, ethnic minority education, and LGBTQI students in Asian schools. The volume displays the current state of the scholarship for schools and schooling in Asia, including emerging, controversial, and cutting-edge contributions using a thematic approach. The content offers a broad sweep of the region with a focus on theoretical, cultural, and political issues, as well as identifying educational issues and priorities such as curriculum, assessment, teacher education, school leadership, etc., all of which impact students and learning in multiple ways. The Routledge International Handbook of Schools and Schooling in Asia brings together experts in each area to contribute their knowledge, providing a multidimensional and rich view of the issues confronting the region's school and education systems. Chapters 34, 35, 36, 37, and 38 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non-Commercial No Derivatives (CC BY-NC-ND 4.0) license.

[Proceedings of the Twelfth International Symposium on Human Aspects of Information Security & Assurance \(HAISA 2018\)](#) Nathan Clarke, Steven Furnell, 2018-09-09 The Human Aspects of Information Security and Assurance (HAISA) symposium specifically addresses information security issues that relate to people. It concerns the methods that inform and guide users' understanding of security and the technologies that can benefit and support them in achieving protection. This book represents the proceedings from the 2018 event, which was held in Dundee, Scotland, UK. A total of 24 reviewed papers are included, spanning a range of topics including the communication of risks to end users, user-centred security in system development, and technology impacts upon personal privacy. All of the papers were subject to double-blind peer review, with each being reviewed by at least two members of the international programme committee.

Reinforcement Learning for Cyber-Physical Systems Chong Li, Meikang Qiu, 2019-02-22 Reinforcement Learning for Cyber-Physical Systems with Cybersecurity Case Studies was inspired by recent developments in the fields of reinforcement learning (RL) and cyber-physical systems (CPSs). Rooted in behavioral psychology, RL is one of the primary strands of machine learning. Different from other machine learning algorithms such as supervised learning and unsupervised learning, the key feature of RL is its unique learning paradigm: i.e., trial and error. Combined with deep neural networks, deep RL becomes so powerful that many complicated systems can be automatically managed by AI agents at a superhuman level. On the other hand, CPSs are envisioned to revolutionize our society in the near future. Such examples include the emerging smart buildings, intelligent transportation, and electric grids. However, the conventional hand-programming controller in CPSs could neither handle the increasing complexity of the system nor automatically adapt itself to new situations that it has never encountered before. The problem of how to apply the

existing deep RL algorithms or develop new RL algorithms to enable the real time adaptive CPSs remains open This book aims to establish a linkage between the two domains by systematically introducing RL foundations and algorithms each supported by one or a few state of the art CPS examples to help readers understand the intuition and usefulness of RL techniques Features Introduces reinforcement learning including advanced topics in RL Applies reinforcement learning to cyber physical systems and cybersecurity Contains state of the art examples and exercises in each chapter Provides two cybersecurity case studies Reinforcement Learning for Cyber Physical Systems with Cybersecurity Case Studies is an ideal text for graduate students or junior senior undergraduates in the fields of science engineering computer science or applied mathematics It would also prove useful to researchers and engineers interested in cybersecurity RL and CPS The only background knowledge required to appreciate the book is a basic knowledge of calculus and probability theory
