

Lesson 8-3: Proving Triangles Similar

Similar triangles...almost but not quite congruent

Yesterday we learned the basics of similarity: polygons are considered similar when:

1. All corresponding angles are congruent.
2. The lengths of all corresponding sides are proportional.

Today we are going to work specifically with triangles. If you recall, there are many ways to determine if triangles are congruent. You can think of similar triangles as triangles that are almost, but not quite congruent.

What does this have to do with anything?

This stuff sure seems abstract. What application does it have? Is this stuff ever even used in the real world?

Yesterday we learned about the golden rectangle. It is a rectangle with a specific length to width ratio. This ratio (the golden ratio) is found to be pleasing to the eye for most people. The same holds true for similar triangles (or other polygons for that matter).

One way to think about similar triangles is two triangles that are not identical but do balance each other nicely. Thus, you will see similar triangles used extensively in art and architecture. Balance and proportionality is very important to the human eye...it is a fundamental element of beauty. So, being able to work with and come up with similar shapes is central to the arts and architecture.

Three ways to determine triangle similarity

There are three basic ways to determine if two triangles are similar. They are:

Postulate 8-1 Angle-Angle Similarity (AA-)

If two angles of a triangle are congruent to two angles of another triangle, then the triangles are similar.

$$\text{If } \angle T \cong \angle P \text{ \& } \angle R \cong \angle L \text{ then } \triangle TRS \sim \triangle PLM$$

Theorem 8-1 Side-Angle-Side Similarity (SAS-)

If an angle of one triangle is congruent to an angle of another triangle, and the sides including the congruent angles are proportional, then the triangles are similar.

$$\text{If } \angle A \cong \angle Q \text{ \& } \frac{AB}{QR} = \frac{AC}{QS} \text{ then } \triangle ABC \sim \triangle QRS$$

Theorem 8-2 Side-Side-Side Similarity (SSS-)

If the corresponding sides of two triangles are proportional, then the triangles are similar.

$$\text{If } \frac{AB}{QR} = \frac{AC}{QS} = \frac{BC}{RS} \text{ then } \triangle ABC \sim \triangle QRS$$
