Digital Photoelasticity K. Ramesh, 2012-12-06 Rapid strides have been made in the use of digital image processing techniques for data acquisition in photoelasticity in the last two decades Techniques such as fringe thinning fringe clustering fringe tracing phase shifting polarization stepping and Fourier transform methods have significantly contributed to the automation of data acquisition The recent developments in colour image processing and development of tricolour light source have added a new dimension The use of time delay and integration TDI camera techniques has extended digital photoelasticity for dynamic analysis Now the field of Digital Photoelasticity has matured to a level where it could be used to solve problems in industries Apart from developments in data acquisition techniques several methods have also come into existence for efficient processing of experimental data Extensive use of computer graphics has found a unique place in presenting the experimental results in a meaningful way Though there has been significant developments in data processing and data acquisition in the last two decades there is no book available yet to present these developments in a comprehensive way The motivation for this book is based on the experience of teaching the course on Experimental Methods in Stress

Analysis at IIT Kanpur for the last 10 years I have always felt a need for introducing Digital Image Processing in an appropriate way which will be useful for an experimentalist

Matrix Theory of Photoelasticity Pericles S. Theocaris, E.E. Gdoutos, 2013-06-29

Photoelasticity as an experimental method for analyzing stress fields in mechanics was developed in the early thirties by the pioneering works of Mesnager in France and Coker and Filon in England Almost concurrently F ppl Mesmer and Oppel in Germany contributed significantly to what turned out to be an amazing development Indeed in the fifties and sixties a tremendous number of scientific papers and monographs appeared all over the world dealing with various aspects of the method and its applications in experimental stress analysis All of these contributions were based on the so called Neumann Maxwell stress optical law they were developed by means of the classical methods of vector analysis and analytic geometry using the conventional light vector concept This way of treating problems of mechanics by photoelasticity indicated many shortcomings and drawbacks of this classical method especially when three dimensional problems of elasticity had to be treated and when complicated load and geometry situations existed Meanwhile the idea of using the Poincare sphere for representing any polarization profile in photoelastic applications was introduced by Robert in France and Aben in the USSR in order to deal with problems of polarization of light passing through a series of optical elements retarders and/or rotators Although the Poincare sphere presentation of any polarization profile constitutes a powerful and elegant method it exhibits the difficulty of requiring manipulations in three dimensional space on the surface of the unit sphere However other graphical methods have been developed to bypass this difficulty

IUTAM Symposium on Advanced Optical Methods and Applications in Solid Mechanics Alexis Lagarde, 2006-04-11

The request to organize under its patronage at Poitiers in 1998 a Symposium entitled Advanced Optical Methods and Applications in Solid Mechanics by the International Union of Theoretical and Applied Mechanics I U T A M was well received for the following two reasons First for nearly 20 years no Symposium devoted to optical methods in solids had been organized Second recent advances in digital image processing provided many new applications which are described in the following We have the honour to present here the proceedings of this Symposium st th The Symposium took place from August 31 to September 4 at the Institut International de la Prospective in Futuroscope near Poitiers A significant number of internationally renowned specialists had expressed their wish to participate in this meeting The Scientific Committee proposed 16 general conferences and selected 33 regular lectures and 17 poster presentations Papers corresponding to

posters are not differentiated in the proceedings from those that were presented orally It is worth noting that a total of 80 participants representing 16 countries registered for this symposium The Scientific Committee deserves praise for attracting a significant number of young scientists both as authors and as participants Let us add our warm acknowledgements to Professor J W Dally and to Professor A S Kobayashi who throughout the symposium preparation time brought us valuable help
