Riley, Thomas W. Rosanske, 1996-05-29 The need to validate an analytical or bioanalytical method is encountered by analysts in the pharmaceutical industry on an almost daily basis because adequately validated methods are a necessity for approvable regulatory filings What constitutes a validated method however is subject to analyst interpretation because there is no universally accepted industry practice for assay validation This book is intended to serve as a guide to the analyst in terms of the issues and parameters that must be considered in the development and validation of analytical methods In addition to the critical issues surrounding method validation this book also deals with other related factors such as method development data acquisition automation cleaning validation and regulatory considerations The book is divided into three parts Part One comprising two chapters looks at some of the basic concepts of method validation Chapter 1 discusses the general concept of validation and its role in the process of

transferring methods from laboratory to laboratory Chapter 2 looks at some of the critical parameters included in a validation program and the various statistical treatments given to these parameters Part Two Chapters 3 4 and 5 of the book focuses on the regulatory perspective of analytical validation Chapter 3 discusses in some detail how validation is treated by various regulatory agencies around the world including the United States Canada the European Community Australia and Japan This chapter also discusses the International Conference on Harmonization ICH treatment of assay validation Chapters 4 and 5 cover the issues and various perspectives of the recent United States vs Barr Laboratories Inc case involving the retesting of samples Part Three Chapters 6 12 covers the development and validation of various analytical components of the pharmaceutical product development process This part of the book contains specific chapters dedicated to bulk drug substances and finished products dissolution studies robotics and automated workstations biotechnology products biological samples analytical methods for cleaning procedures and computer systems and computer aided validation Each chapter goes into some detail describing the critical development and related validation considerations for each topic This book is not intended to be a practical description of the analytical validation process but more of a guide to the critical parameters and considerations that must be attended to in a pharmaceutical development program Despite the existence of numerous guidelines including the recent attempts by the ICH to be implemented in 1998 the practical part of assay validation will always remain to a certain extent a matter of the personal preference of the analyst or company Nevertheless this book brings together the perspectives of several experts having extensive experience in different capacities in the pharmaceutical industry in an attempt to bring some consistency to analytical method development and validation

HPLC Method Development and Validation in Pharmaceutical Analysis Ghulam Shabir,2013-01 This handbook is concerned with new chromatographic method development and validation using novel systematic approaches for pharmaceutical compounds The first stage of the research was to study how method development and validation are typically carried out at present and to formulate this into a simple step by step approach Such a template and protocol was not only used as the foundation of this research programme but could also serve as a simple systematic guide for other practitioners in the pharmaceutical industry Furthermore it was recognised that this protocol should satisfy the requirements of the major regulatory agencies The second stage of this research involved evaluation and application of the above validation approach to new methods that were developed for a diverse range of analytes using HPLC LC MS and GC In essence the critical review of the requirements for method validation for various agencies and the subsequent preparation of single guidelines on how to go about method validation have had a significant impact on analytical practitioners worldwide

Chromatography for Pharmaceutical Analysis Daemon Lincoln,1994 The successful hyphenation of chromatographic and spectroscopic methods in recent years has led to highly flexible separation systems offering levels of selectivity and sensitivity previously unattainable In addition to this computer aided hyphenated systems typically LC DAD and LC MS are making a major impact in the pharmaceutical industry leading to novel techniques for on line and off line analytical method validation In particular a wide variety of both univariate and multivariate data processing methods have been developed for the critical area of peak homogeneity assessment in liquid chromatography Theoretical considerations presented here would seem to indicate that significant gains in detection sensitivity for minor co eluting impurities should be possible by employing LC MS as opposed to LC DAD This work also assesses the performance of several established multivariate statistical techniques for peak purity analysis against that of a newly developed approach the K Function This is achieved by utilising real data sets from a reversed phase LC MS system for two solutes with identical UV absorption spectra and for a standard LC DAD system with two solutes whose UV absorption spectra are very similar tilda 0 99 Simulated data sets are generated that allow the influence of chromatographic resolution the minor component level spectral correlation and signal to noise ratio to be Systematically investigated Furthermore the relevance of the differential information content of thermospray particle beam chemical ionisation and particle beam electron impact mass spectra is considered with respect to the performance of multivariate techniques for peak purity assessment
