transmitted The designed UWB transmitter circuit has been simulated using NI Multisim 11 0 The circuit successfully generated a kind of inverted Gaussian pulses with the best pulse width achieved is 1 91 ns and pulse amplitude is 5 72V The Power Spectral Density PSD of the pulses satisfies the specification of FCC mask defined with the magnitude of 81 5 dBm at 3 1GHz frequency In fact the PRNG pass the NIST Test Suite randomness tests With the features such as simple structure high speed and low power as low cost this circuit system is applicable to UWB wireless communication system Digital Systems Ronald J. Tocci,2004 **Electronic Communication Systems** Thomas Burns,2001-12 Now in its second edition Electronic Communications Systems provides electronics technologists with an extraordinarily complete accurate and timely introduction to all of the state of the art technologies used in the communications field today Comprehensive coverage includes traditional analog systems as well as modern digital techniques Extensive discussion of today s modern wireless systems including cellular radio paging systems and wireless data networks is also included In addition sections on data communication and the internet high definition television and fiber optics have been updated in this edition to enable readers to keep pace with the latest technological advancements A block diagram approach is emphasized throughout the book with circuits included when helpful to lead readers to an understanding of fundamental principles Instructive step by step examples using MultiSIM
