Lourenço, Angelo Gaetani, 2022-05-23 Existing structures represent a heterogeneous category in the global built environment as often characterized by the presence of archaic materials damage and disconnections uncommon construction techniques and subsequent interventions throughout the building history In this scenario the common linear elastic analysis approach

adopted for new buildings is incapable of an accurate estimation of structural capacity leading to overconservative results invasive structural strengthening added intervention costs excessive interference to building users and possible losses in terms of aesthetics or heritage values For a rational and sustainable use of the resources this book deals with advanced numerical simulations adopting a practical approach to introduce the fundamentals of Finite Element Method nonlinear solution procedures and constitutive material models Recommended material properties for masonry timber reinforced concrete iron and steel are discussed according to experimental evidence building standards and codes of practice The examples examined throughout the book and in the conclusive chapter support the analyst s decision making process toward a safe and efficient use of finite element analysis Written primarily for practicing engineers the book is of value to students in engineering and technical architecture with solid knowledge in the field of continuum mechanics and structural design

This comprehensive textbook combines classical and matrix based methods of structural analysis and develops them concurrently. It is widely used by civil and structural engineering lecturers and students because of its clear and thorough style and content. The text is used for undergraduate and graduate courses and serves as reference in structural engineering practice. With its six translations, the book is used internationally independent of codes of practice and regardless of the adopted system of units. Now in its seventh edition, the introductory background material has been reworked and enhanced throughout and particularly in early chapters. Explanatory notes, new examples and problems are inserted for more clarity along with 160 examples and 430 problems with solutions. Dynamic analysis of structures and applications to vibration and earthquake problems are presented in new sections and in two new chapters. The companion website provides an enlarged set of 16 computer programs to assist in teaching and learning linear and nonlinear structural analysis. The source code, an executable file, input examples and a brief manual are provided for each program.
