Managing Packaging Design for Sustainable Development Daniel Hellström, Annika Olsson, 2016-12-14 Packaging design is a powerful vehicle for making our lives friendlier our planet greener and our businesses richer It is an essential link between the producer and the customer where it contributes to the positioning and presentation of a product and on many occasions the use of the product after purchase What is missing is a compass that can guide practitioners in the right direction This is particularly so in the field of packaging where the routes you take may contradict rather than contribute to sustainable development Managing Packaging Design for Sustainable Development A Compass for Strategic Directions emphasizes the need to rethink packaging system design by presenting a strategic packaging design tool a compass The compass encourages you to go off road to develop and innovate and to remake the packaging design solution that previously was best practice Theory and practical applications are balanced by outlining

the most crucial tenets of packaging design for sustainability and by illustrating wide range of real life cases that will inspire and challenge the mindsets of those who apply the compass in packaging design related projects This is a must have book for designers engineers logisticians marketers supply chain professionals and other managers who seek guidance on sustainable solutions through packaging design

design affect consumer purchase related behaviors through inference making processes Chapter 1 provides the background of the thesis and describes the overarching theoretical framework Chapter 2 presents an initial empirical test of consumer cue perception and inference making processes by using a methodology of idiosyncratic attribute elicitation to analyse consumer response to a series of tomato soup packaging designs The findings show that packaging sustainability is a highly salient association second to convenience related perceptions but is only moderately important for consumer attitudes Moreover packaging sustainability cues inform further inference making regarding a variety of consumer benefits such as product sustainability price healthiness quality and expected taste Results also show a large gap between consumer perception of packaging sustainability and experts life cycle analysis outcomes Chapter 3 examines how packaging can be actively redesigned to be more sustainable It considers the extent to which three different sustainable redesign strategies based on circular economy design literature affect consumer purchase intentions moral satisfaction willingness to pay and benefit inferences The results showed that consumers tend to prefer circular over linear strategies and biologically circular over technically circular ones Additionally applying combinations of such redesign strategies leads to diminished increases in perceived sustainability and consumers derive little additional moral satisfaction from more intensively redesigned packaging Chapter 4 focusses on the influence of packaging sustainability in conjunction with product contents sustainability and different firm sustainability advertisement claims Findings showed that consumers are more likely to infer deceptive firm intentions when firms provide environmental claims for packaged products that are only partially sustainable For such products consumers make both positive and negative inferences such that they positively value the improved environmental impacts yet at the same time negatively value the deceitful actions of the firm The usage of advertisement puffery has both pros and cons such that it strengthens both the positives and negatives Furthermore drawing from centrality theories the results also suggest that consumers tend to be more critical when only a peripheral attribute packaging is made sustainable versus when only a central attribute product contents is sustainable Chapter 5 examines the mental associations between sustainability low strength high gentleness benefits The chapter investigates how overtly sustainable vs conventional laundry detergent packaging affects consumer choices depending on consumers intended laundry usage strength vs gentleness emphasis Results show that the sustainable option is disadvantaged in consumer choices when consumers seek strength and is preferred when they seek gentleness benefits The perceived strength deficiency can partially be overcome by providing aesthetical masculinity signals through packaging design and packaging that contains both sustainability and masculinity design cues is perceived relatively favourable in terms of perceived strength gentleness and environment friendliness Lastly Chapter 6 summarizes the main findings and discusses theoretical and practical implications Overall this thesis shows that functional and aesthetical sustainable packaging design does not merely change consumers potentially inaccurate view of that packaging s environmental qualities but causes consumers to make a range of inferences which affect packaged product

choice Successful sustainable packaging design should seek to reinforce those consumer inferences with positive effects and or inhibit inferences with potential negative effects to ensure an overall attractive packaged product proposition

Packaging Design Conway Lloyd Morgan,1997 Contains fifty designs from companies around the world including Nicole Fahri Body Shop and Smirnoff **Designing for Re-use** Tom Fisher,Janet Shipton,2010 Packaging is ephemeral its purpose is to be wasted once we ve removed the product it contains Whilst we are encouraged to reduce re use and recycle Designing for Re Use proposes that domestic re use is the Cinderella of this trinity because it is under researched and little understood The re use of packaging could have a significant effect on the quantity of material that enters the waste stream and the energy and consequently carbon that is expended in its production every re used item is another item not purchased The authors demonstrate that we do re use but usually despite rather than because of the actions of government and designers The book shows that by understanding the ways in which actions of this sort fit with everyday life opportunities may be identified to enhance the potential for re use through packaging design The authors itemize the factors that affect the re use of packaging and analyse the home as a system in which objects are processed Some of these factors relate to the specifics of the design including the type of materials used and the symbolism of the branding Other factors are more obviously social for instance the effects on re use of different consumer orientations The book provides practical guidance from a design perspective in the context of real life examples to provide professionals with vital design recommendations and evaluate how a practice orientated approach to understanding consumers behaviour is significant for moving towards sustainability through design *The Design of Sustainable Food Packaging* Ella O'Leary Watson,2015
