The Williams Dictionary of Biomaterials , 1999-01-01 There has been a rapid expansion of activity in the area of biomaterials and related medical devices both in scientific terms and in clinical and commercial applications The definition of terms has failed to keep pace with the rapidity of these developments and there is considerable confusion over the terminology used in this highly multi and inter disciplinary area This confusion has arisen partly from the use of inappropriate terms which already have well defined meanings in their parent disciplines but which are used inexpertly by those working in other disciplines and partly from the haphazard generation of new terms for the purpose of defining new phenomena or devices For example many terms used in pathology with distinct if not readily understood meanings are used by materials scientists to describe biocompatibility phenomena with slightly changed or even wholly misrepresented meanings similarly terms from materials science and engineering are seriously misused by biologists and clinicians working in this field The leading proponent of harmonization and clarity in medical device terminology Professor D F Williams has been influential in setting the standard for the accurate definition of some of the terms used In particular the definition of biocompatibility the Williams definition agreed at a 1987 conference has been adopted worldwide Now in association with O Donnell and Associates of Brussels he has prepared The Williams Dictionary to provide a definitive exposition of the meaning of the terminology used in the area of biomaterials and medical devices It includes definitions and
