Qlik Sense Essential Training Curt Frye, 2019 Mastering Qlik Sense Diksha Bhosle, 2019 You've probably done some beginner work on Qlik Sense so you know how easy it is to work with the interface. However, there is always more than what we see on the Qlik Sense dashboard. Work done by developers in the extremity plays a very important role while making an appealing and well-performing dashboard. If your data model is not designed appropriately, you will face issues not only with the performance of the app but also with the quality of its output. In this course, we look at everything that goes into creating a data model to give you the most optimized performance, including how to load data from different data sources, fix synthetic keys, and other issues. Also included are topics such as creating link tables, the master calendar script, and applying set analysis to your data. Thus, you will master the art of creating dashboards that are not only visually appealing and accurate but also very informative and a BIG bonus to your team while making those tough decisions. Visual Intelligence Amy Herman, 2016 An engrossing guide to seeing and communicating more clearly from the groundbreaking course that helps FBI agents, policemen, CEOs, ER docs, and others save money, reputations, and lives. How could looking at Monet's water lily paintings help save your company millions? How can checking out people's footwear foil a terrorist attack? How can your choice of adjective win an argument, calm your kid, or catch a thief? In her celebrated seminar, *The Art of Perception*, art historian Amy Herman has trained experts from many fields how to perceive and communicate better. By showing people how to look closely at images, she helps them hone their visual intelligence, a set of skills we all possess but few of us know how to use properly. She has spent more than a decade teaching doctors to observe patients instead of their charts, helping police officers separate facts from opinions when investigating a crime, and training professionals from the FBI, the State Department, Fortune 500 companies, and the military to recognize the most pertinent and useful information. Her lessons highlight far more than the physical objects you may be missing; they teach you how to recognize the talents, opportunities, and dangers that surround you every day. Whether you want to be more effective on the job, more empathetic toward your loved ones, or more alert to the trove of possibilities and threats all around us, this book will show you how to see what matters most to you more clearly than ever before.

AUTHOR Amy E. Herman developed and conducts all sessions of *The Art of Perception* using the analysis of works of art to improve perception and communication. She leads the program nationally for a range of institutions, including the New York City Police Department, the FBI, and the Department of Defense, as well as for leaders in education, finance, and policy. She holds an A.B., a J.D., and an M.A. in art history.

SELLING POINTS Best-selling category: Visual Intelligence. It is one of those rare books that transforms the way you see the world around you and gives you the tools you need to act on what it teaches. Think of it as the handbook you read to put the insights of *The Invisible Gorilla* and *Blink* into practice. Exciting

observation and perception are two skills that are crucial to achieving success in any chosen field. Whatever profession you find yourself in, the ability to look past all the noise and distractions and catch main ideas and details is very important. Only a fraction of the population has mastered the art of perception. In our busy life and schedule, we tend to miss the smaller details that hold the most opportunities. Only those who have over the years trained their mind to observe and catch the finer details go on to become outstanding. There is a dire need for visually intelligent individuals. People who pay attention to the finer details who perceive correctly, observe critically, communicate effectively, and analyze situations perfectly. This book will teach you how to become visually intelligent. The action tips provided in this book, when followed religiously, will sharpen your perception, analytic skills, and communication ability. Art is an integral part of visual intelligence. It can be used as a vehicle to teach, illustrate, and highlight what most people fail to see when looking at a scene. Seeing that this is true, this book has been written with a lot of reference to art. Inside, you will learn some of the ways in which paying attention to details is necessary to help you detect changes in your environment. Once your visual sense is developed and alert, you will better understand how to sense danger and look out for interesting opportunities. It's almost like having a third eye. This book will carry you through some of the major shortcomings in human observational skills and show you how you can use these shortcomings for your own benefit. Your visual performance as an artist or a mere observer of the world will be greatly increased. Some of the gems hidden inside the pages of this book include: How to control the filters in your subconscious, Understanding the concept of sight, The value of Objective Surveillance, Dissecting body language, Understanding human perspectives, How to see every opportunity, Unlocking the power of an observer, Understanding Illusions, The art of effective communication, and so much more. Visual Intelligence Through Human Learning Ranjay Krishna, 2021. At the core of human development is the ability to adapt to new, previously unseen stimuli. We comprehend new situations as a composition of previously seen information and ask one another for clarification when we encounter new concepts. Yet this ability to go beyond the confounds of their training data remains an open challenge for artificial intelligence. My research designs visual intelligence to reason over new compositions and acquire new concepts by interacting with people. I draw on ideas from human learning, from human cognition and human interaction to deliver representations, training frameworks, models, evaluation protocols, and interactions for computer vision. My dissertation will explore some of the challenges associated with existing vision methods and present the two following lines of work. Drawing on human cognition, I will introduce scene graphs, a cognitively grounded compositional visual representation. With the scene graph representation, I will show that it is possible for models to learn from a finite set of situations outlined in their training data and allows models to recognize new compositions of previously seen concepts. I will build scene graph models that can recognize new visual relationships with as few as 10 labels per relationship. Finally, I will demonstrate how scene graphs can be used to improve core computer vision.

tasks such as action recognition improving existing baselines with as few as 5 training examples Since our introduction of scene graphs the computer vision community has developed hundreds of scene graph models and utilized scene graphs to achieve state of the art results across multiple core tasks including object localization captioning image generation question answering 3D understanding and spatio temporal action recognition Drawing on human interaction I will introduce a framework for socially situated learning This framework pushes agents beyond traditional active learning paradigms and enables learning from human interactions in social environments Using this framework I will design a real world deployment of a socially situated agent our agent learns to acquire new concepts by asking people targeted questions on social media about the contents of the photos they upload By interacting with over 230K people over 8 months our agent learns to recognize hundreds of new concepts Finally To promote pro social human computer interactions I will demonstrate the importance of choosing appropriate metaphors to describe intelligent systems Together this dissertation exhibits the benefits of drawing on ideas from human learning to develop better visual intelligence My research connects ideas from cognitive science and social psychology with advances in computer vision natural language processing machine learning and human computer interaction
