Digital Signal Processing K. Deerga Rao, M.N.S. Swamy, 2018-04-14 The book provides a comprehensive exposition of all major topics in digital signal processing DSP With numerous illustrative examples for easy understanding of the topics it also includes MATLAB based examples with codes in order to encourage the readers to become more confident of the fundamentals and to gain insights into DSP Further it presents real world signal processing design problems using MATLAB and programmable DSP processors In addition to problems that require analytical solutions it discusses problems that require solutions using MATLAB at the end of each chapter Divided into 13 chapters it addresses many emerging topics which are not typically found in advanced texts on DSP It includes a chapter on adaptive digital filters used in the signal processing problems for faster acceptable results in the presence of changing environments and changing system requirements Moreover it offers an overview of wavelets enabling readers to easily understand the basics and applications of this powerful mathematical tool for signal and image processing The final chapter explores DSP processors which is an area of growing interest for researchers A valuable resource for undergraduate and graduate students it can also be used for self study by researchers practicing engineers and scientists in electronics communications and computer engineering as well as for teaching one to two semester courses

Mathematical Methods in Engineering Kenan Taş, Dumitru Baleanu, J. A. Tenreiro Machado, 2018-08-02 This book presents recent developments in nonlinear dynamics with an emphasis on complex systems The volume illustrates new methods to characterize the solutions of nonlinear dynamics associated with complex systems This book contains the following topics new solutions of the functional equations optimization algorithm for traveling salesman problem fractals control fractional calculus models fractional discretization local fractional partial differential equations and their applications and solutions of fractional kinetic equations

Computational Intelligence in Biomedical Engineering Rezaul Begg, Daniel T.H. Lai, Marimuthu Palaniswami, 2007-12-04 As in many other fields biomedical engineers benefit from the use of computational intelligence CI tools to solve complex and non linear problems The benefits could be even greater if there were scientific literature that specifically focused on the biomedical applications of computational intelligence techniques The first comprehensive field

Advances in Modelling and Control of Non-integer-Order Systems Krzysztof J. Latawiec, Marian Łukaniszyn, Rafał Stanisławski, 2014-08-16 This volume presents selected aspects of non integer or fractional order systems whose analysis synthesis and applications have increasingly become a real challenge for various research communities ranging from science to engineering The spectrum of applications of the fractional order calculus has incredibly expanded in fact it would be hard to find a science engineering related subject area where the fractional calculus had not been incorporated The content of the fractional calculus is ranged from pure mathematics to engineering implementations and so is the content of this volume The volume is subdivided into six parts reflecting particular aspects of the fractional order calculus The first part contains a single invited paper on a new

formulation of fractional order descriptor observers for fractional order descriptor continuous LTI systems The second part provides new elements to the mathematical theory of fractional order systems In the third part of this volume a bunch of new results in approximation modeling and simulations of fractional order systems is given The fourth part presents new solutions to some problems in controllability and control of non integer order systems in particular fractional PID like control The fifth part analyzes the stability of non integer order systems and some new results are offered in this important respect in particular for discrete time systems The final sixth part of this volume presents a spectrum of applications of the noninteger order calculus ranging from bi fractional filtering in particular of electromyographic signals through the thermal diffusion and advection diffusion processes to the SIEMENS platform implementation This volume's papers were all subjected to stimulating comments and discussions from the active audience of the RRNR 2014 the 6th Conference on Non integer Order Calculus and Its Applications that was organized by the Department of Electrical Control and Computer Engineering Opole University of Technology Opole Poland *EDN*, 2006
