

# Direct Proportion

**Direct proportion** is a type of proportionality relationship; as one variable increases/decreases, so does the other variable.

To calculate an unknown value that is directly proportional to another, we use a multiplier, known as the **constant of proportionality**.

The symbol  $\propto$  means 'is proportional to'.

If  $y$  is **directly proportional to**  $x$ , we can write this relationship as  $y \propto x$ .

As  $y \div x = k$  where  $k$  is the constant of proportionality, we can deduce the direct proportion formula:

$$y = kx$$
