Digital Signal Processing Rao D. Ganesh, 2010-09      **Digital Signal Processing- Theory And Lab Practice** D Ganesh Rao, 2009-01-01 This is a book about fundamentals to serve the needs of an introductory one semester course in DSP We have attempted to do a thorough job on the basic principles because our experience has been that these are the most difficult concepts for students to master Once the fundamentals are strong an understanding of advanced concept can be done without much ado This is also a book about problems solving seeing interrelationships and connections and integrating one's knowledge Features The conventional writing style in the book conveys our objective of getting the reader involved with the material as a participant in the development rather than a mute observer A self contained presentation of DSP techniques that requires only a minimum amount of calculus and advanced level topics involving complex numbers as prerequisites Each chapter begins with a brief introduction and ends with the summary of points The actual concepts are sandwiched between them This brings as to the memory a good old adage tell them what you are going to tell them tell them what you have told them A large number of worked examples and reinforcement problems are provided to learn strengthen and master the abstract concepts Figures are drawn in abundance with clarity to illustrate the important concepts Consistent notation is an indispensable part of accuracy ambiguous notation leads to confusion We have invested effort in developing a consistent notation for this book In explaining theoretical concepts accuracy is almost important We therefore avoid cutting corners but spend the necessary time and effort to supply accurate and detailed derivations Organized procedures for digital filter design Designs are verified by checking the given frequency domains specifications Answers are provided to all the exercise problems at the end of each chapter Contents Introduction to Signals and Systems The Z Transformation The DFT and FFT Design of IIR Filters Design of FIR Filters Realization of Digital Filters      Advances in Signal Processing and Intelligent Recognition Systems Sabu M. Thampi, Sanghamitra Bandyopadhyay, Sri Krishnan, Kuan-Ching Li, Sergey Mosin, Maode Ma, 2015-12-24 This Edited Volume contains a selection of refereed and revised papers originally presented at the second International Symposium on Signal Processing and Intelligent Recognition Systems SIRS 2015 December 16 19 2015 Trivandrum India The program committee received 175 submissions Each paper was peer reviewed by at least three or more independent referees of the program committee and the 59 papers were finally selected The papers offer stimulating insights into biometrics digital watermarking recognition systems image and video processing signal and speech processing pattern recognition machine learning and knowledge based systems The book is directed to the researchers and scientists engaged in various fields of signal processing and related areas      Digital Signal Processing D.
