Hydrology In Practice:

Hydrology in Practice, Fourth Edition Elizabeth M. Shaw, Keith J. Beven, Nick A. Chappell, Rob Lamb, 2010-07-30
Hydrology in Practice is an excellent and very successful introductory text for engineering hydrology students who go on to be practitioners in consultancies the Environment Agency and elsewhere This fourth edition of Hydrology in Practice while retaining all that is excellent about its predecessor by Elizabeth M Shaw replaces the material on the Flood Studies Report with an equivalent section on the methods of the Flood Estimation Handbook and its revisions Other completely revised sections on instrumentation and modelling reflect the many changes that have occurred over recent years The updated text has taken advantage of the extensive practical experience of the staff of JBA Consulting who use the methods described on a day to day basis Topical case studies further enhance the text and the way in which students at undergraduate and MSc level can relate to it The fourth edition will also have a wider appeal outside the UK by including new material on hydrological processes which also relate to courses in geography and environmental science departments In this respect the book draws on the expertise of Keith J Beven and Nick A Chappell who have extensive experience of field hydrological studies in a variety of different environments and have taught undergraduate hydrology courses for many years Second and final year undergraduate and MSc students of hydrology in engineering environmental science and geography departments across the globe as well as professionals in environmental protection agencies and consultancies will find this book invaluable It is likely to be the course text for every undergraduate MSc hydrology course in the UK and in many cases overseas too

transform precipitation into water and the possible development of regional waters for human uses The preparation and delivery of these lectures were entrusted by the department to outstanding scientists in the fields of hydrology and water resources thus attaining a double objective On the one hand the lectures became salient points on a time trajectory when specific facets of the broad agenda of scientific issues studied in the department were brought to the limelight of a public discourse On the other hand the lectures also provided opportunities for reflection on contemporary problems and on the approaches for their study and analysis
