Botheroyd,1995 **Handbook of Solid-State Lasers** B Denker,E Shklovsky,2013-02-20 Solid state lasers which offer multiple desirable qualities including enhanced reliability robustness efficiency and wavelength diversity are absolutely indispensable for many applications The Handbook of solid state lasers reviews the key materials processes and applications of solid state lasers across a wide range of fields Part one begins by reviewing solid state laser materials Fluoride laser crystals oxide laser ceramics crystals and fluoride laser ceramics doped by rare earth and transition metal ions are discussed alongside neodymium erbium and ytterbium laser glasses and nonlinear crystals for solid state lasers Part two then goes on to explore solid state laser systems and their applications beginning with a discussion of the principles powering and operation regimes for solid state lasers The use of neodymium doped materials is considered followed by system sizing issues with diode pumped quasi three level materials erbium glass lasers and microchip fiber Raman and cryogenic lasers Laser mid infrared systems laser induced breakdown spectroscopy and the clinical applications of surgical solid state lasers are also explored The use of solid state lasers in defense programs is then reviewed before the book concludes by presenting some environmental applications of solid state lasers With its distinguished editors and international team of expert contributors the Handbook of solid state lasers is an authoritative guide for all those involved in the design and application of this technology including laser and materials scientists and engineers medical and military professionals environmental researchers and academics working in this field Reviews the materials used in solid state lasers Explores the principles of solid state laser systems and their applications Considers defence and environmental applications International Aerospace Abstracts ,1999 *LaserOpto* ,1999 *Laser and Plasma Applications in Materials Science* El-Hachemi Amara,Said Boudjemai,Djamila Doumaz,2008-10-16 All papers were peer reviewed In the industry the laser is placed like a tool having shown its effectiveness from the point of view of the tasks execution speed the accuracy and the quality of the obtained result Beside the plasmas obtained by laser by discharge or the dusty plasmas are now intensively studied both by theoretical and experimental approaches since their applications are very promising in many fields The First International Conference on Laser and Plasma Applications in Materials Science LAPAMS 08 organized by the Centre de D veloppement des Technologies Avanc es CDTA of Algiers Its objective was to present the state of the art the trends the fundamental aspects of the interaction between a laser beam and material and the modelling and simulation of laser and plasma for the applications The conference gathered 16 eminent invited speakers in different research fields related to laser and plasma technologies and applications These invited speakers known for their international notoriety were from Canada USA France United Kingdom Spain Italy South Africa and Algeria Beside about 120 scientists researchers engineers and students from ten countries of the African European and American continents have participated to the conference More than 100 contributions have been submitted and the accepted ones were selected by LAPAMS 08 scientific committee *High Average Power Diode Pumped Solid State Lasers for CALIOPE.* ,1994 Diode pumping of solid state media offers the

opportunity for very low maintenance high efficiency and compact laser systems For remote sensing such lasers may be used to pump tunable non linear sources or if tunable themselves act directly or through harmonic crystals as the probe The needs of long range remote sensing missions require laser performance in the several watts to kilowatts range At these power performance levels more advanced thermal management technologies are required for the diode pumps The solid state laser design must now address a variety of issues arising from the thermal loads including fracture limits induced lensing and aberrations induced birefringence and laser cavity optical component performance degradation with average power loading In order to highlight the design trade offs involved in addressing the above issues a variety of existing average power laser systems are briefly described Included are two systems based on Spectra Diode Laboratory s water impingement cooled diode packages a two times diffraction limited 200 watt average power 200 Hz multi rod laser amplifier by Fibertek and TRW s 100 watt 100 Hz phase conjugated amplifier The authors also present two laser systems built at Lawrence Livermore National Laboratory LLNL based on their more aggressive diode bar cooling package which uses microchannel cooler technology capable of 100% duty factor operation They then present the design of LLNL s first generation OPO pump laser for remote sensing This system is specified to run at 100 Hz 20 nsec pulses each with 300 mJ less than two times diffraction limited and with a stable single longitudinal mode The performance of the first testbed version will be presented The authors conclude with directions their group is pursuing to advance average power lasers This includes average power electro optics low heat load lasing media and heat capacity lasers
