**MACHINE LEARNING: A COMPREHENSIVE OVERVIEW OF ALGORITHMS AND TECHNIQUES**, 2023-07-04 The field of artificial intelligence AI and computer science known as machine learning is focused on the use of data and algorithms to simulate the method in which people learn with the goal of continuously improving the accuracy of the simulation Machine learning has a long and illustrious history at IBM As a result of Arthur Samuel s study PDF 481 KB link lives outside of IBM revolving around the game of checkers the phrase machine learning is often regarded as having been first used by a member of IBM s

staff Robert Nealey who fancied himself the world's best player at checkers challenged an IBM 7094 computer to a match in 1962 and was defeated by the machine. This accomplishment may appear little when weighed against what is now possible, yet it is recognized as a significant turning point in the development of artificial intelligence. In the past few decades, technical advancements in storage and processing capacity have made it possible for a number of novel products based on machine learning to become available. Some examples of these products are the recommendation engine used by Netflix and autonomous vehicles. The rapidly developing discipline of data science has an essential subfield known as machine learning. Data mining initiatives involve the training of algorithms to create classifications or predictions, as well as the discovery of critical insights through the utilization of statistical methodologies. The subsequent decisions made inside applications and enterprises are influenced by these insights, which should ideally have an effect on key growth indicators. It is expected that there will be a greater need for data scientists in the industry as big data continues to develop and flourish. They will be expected to assist in determining the business questions that are the most pertinent, as well as the data necessary to answer those questions. Frameworks that speed up the construction of solutions are usually used while developing machine learning algorithms. Some examples of such frameworks are TensorFlow and PyTorch.
