Design of Distillation Column Control Systems Page S. Buckley, William L. Luyben, Joseph P. Shunta, 1985 This book was written primarily from the standpoint of an engineering design organization and based on years of experience with large design projects as well as on personal plant experience Most new investment dollars go into new or modernized facilities and it is in the design phase of projects for these facilities that the most opportunities occur and flexibility exists to influence process control Consequently this book is aimed primarily at design personnel however it will also be useful to those who have to operate or troubleshoot existing plants It is the purpose of this book to indicate the range of technology which has been developed for distillation control to the point where it can be economically and reliably used for design

Advanced Distillation Technologies Anton A. Kiss, 2013-02-26 Distillation has historically been the main method for separating mixtures in the chemical process industry However despite the flexibility and widespread use of distillation processes they still remain extremely energy inefficient Increased optimization and novel distillation concepts can deliver substantial benefits not just in terms of significantly lower energy use but also in reducing capital investment and improving eco efficiency While likely to remain the separation technology of choice for the next few decades there is no doubt that distillation technologies need to make radical changes in order to meet the demands of the energy conscious society

Advanced Distillation Technologies Design Control and Applications gives a deep and broad insight into integrated separations using non conventional arrangements including both current and upcoming process intensification technologies It includes Key concepts in distillation technology Principles of design control sizing and economics of distillation Dividing wall column DWC design configurations optimal operation and energy efficient and advanced control DWC applications in ternary separations azeotropic extractive and reactive distillation Heat integrated distillation column HiDiC design equipment and configurations Heat pump assisted applications MVR TVR AHP CHRP TAHP and others Cyclic distillation technology concepts modeling approach design and control issues Reactive distillation fundamentals equipment applications feasibility scheme Results of rigorous simulations in Mathworks Matlab Simulink Aspen Plus Dynamics and Custom Modeler Containing abundant examples and industrial case studies this is a unique resource that tackles the most advanced distillation technologies all the way from the conceptual design to practical implementation The author of *Advanced Distillation Technologies* Dr Ir Anton A Kiss has been awarded the Hoogewerff Jongerenprijs 2013 Find out more website in Dutch
