Hydrology in Practice, Fourth Edition Elizabeth M. Shaw, Keith J. Beven, Nick A. Chappell, Rob Lamb, 2010-07-30
Hydrology in Practice is an excellent and very successful introductory text for engineering hydrology students who go on to be practitioners in consultancies the Environment Agency and elsewhere This fourth edition of Hydrology in Practice while retaining all that is excellent about its predecessor by Elizabeth M Shaw replaces the material on the Flood Studies Report with an equivalent section on the methods of the Flood Estimation Handbook and its revisions Other completely revised sections on instrumentation and modelling reflect the many changes that have occurred over recent years The updated text has taken advantage of the extensive practical experience of the staff of JBA Consulting who use the methods described on a day to day basis Topical case studies further enhance the text and the way in which students at undergraduate and MSc level can relate to it The fourth edition will also have a wider appeal outside the UK by including new material on hydrological processes which also relate to courses in geography and environmental science departments In this respect the book draws on the expertise of Keith J Beven and Nick A Chappell who have extensive experience of field hydrological studies in a variety of different environments and have taught undergraduate hydrology courses for many years Second and final year undergraduate and MSc students of hydrology in engineering environmental science and geography departments across the globe as well as professionals in environmental protection agencies and consultancies will find this book invaluable It is likely to be the course text for every undergraduate MSc hydrology course in the UK and in many cases overseas too Hydrology in Practice Elizabeth M. Shaw, 1988 The introduction of hydrology emphasizes the application of hydrological knowledge to the solution of engineering problems **Hydrology in Practice** Elizabeth Shaw, 2005-11-01 This introduction to hydrology is essentially practical emphasising the application of hydrological knowledge to the solution of engineering problems **Hydrology in Practice** Elizabeth M. understand more about the natural phenomena that transform precipitation into water and the possible development of regional waters for human uses The preparation and delivery of these lectures were entrusted by the department to outstanding scientists in the fields of hydrology and water resources thus attaining a double objective On the one hand the lectures became salient points on a time trajectory when specific facets of the broad agenda of scientific issues studied in the department were brought to the limelight of a public discourse On the other hand the lectures also provided opportunities for reflection on contemporary problems and on the approaches for their study and analysis

Permit Trading in Different Applications Bernd Hansjürgens, Ralf Antes, Marianne Strunz, 2011-06-16 Permit trading is an environmental policy instrument that has received increasing levels of attention over recent years Coming from the field of air quality management with the European CO2 emissions trading system being the most prominent example it enters new fields of application such as land use policy and biodiversity protection water quality and water quantity trading This book gives an overview of these recent developments and discusses the possibilities and limits of permit trading in environmental policies The advantages of permit trading are not only seen with respect to economic efficiency which leads to achieving the environmental target at minimum cost but also with respect to the instrument's environmental effectiveness By setting a cap for the overall emissions a given environmental target can be met This makes permit trading an interesting case for many environmental fields where safeguarding the environmental target plays a dominant role Against this background permit trading is discussed in environmental policy fields where it has not been considered before for example land use management biodiversity protection and water trading Permit Trading in Different Applications analyses the properties of permit trading its possibilities and limitations its design options and its restrictions on a more general level It demonstrates how lessons learnt in established policy fields like air quality management can be transferred to new and emerging fields of application This collection will provide students and practitioners in environmental sciences and policy with valuable research into instrument choice and design with respect to permit trading
