Prophets of Computing Dick van Lente, 2022-12-14 When electronic digital computers first appeared after World War II they appeared as a revolutionary force. Business management, the world of work, administrative life, the nation state, and soon enough everyday life were expected to change dramatically with these machines. Ever since diverse prophecies of computing have continually emerged through to the present day. As computing spread beyond the US and UK such prophecies emerged from strikingly different economic, political, and cultural conditions. This volume explores how these expectations differed, assesses unexpected commonalities, and suggests ways to understand the divergences and convergences. This book examines thirteen countries based on source material in ten different languages, the effort of an international team of scholars. In addition to analyses of debates, political changes, and popular speculations, we also show a wide range of pictorial representations of the future with computers.

Doom Niall Ferguson, 2021-05-04 All disasters are in some sense man made Setting the annus horribilis of 2020 in historical perspective Niall Ferguson explains why we are getting worse not better at handling disasters Disasters are inherently hard to predict Pandemics like earthquakes wildfires financial crises and wars are not normally distributed there is no cycle of history to help us anticipate the next catastrophe But when disaster strikes we ought to be better prepared than the Romans were when Vesuvius erupted or medieval Italians when the Black Death struck We have science on our side after all Yet in 2020 the responses of many developed countries including the United States to a new virus from China were badly bungled Why Why did only a few Asian countries learn the right lessons from SARS and MERS While populist leaders certainly performed poorly in the face of the COVID 19 pandemic Niall Ferguson argues that more profound pathologies were at work pathologies already visible in our responses to earlier disasters In books going back nearly twenty years including *Colossus* *The Great Degeneration* and *The Square and the Tower* Ferguson has studied the foibles of modern America from imperial hubris to bureaucratic sclerosis and online fragmentation Drawing from multiple disciplines including economics cliodynamics and network science *Doom* offers not just a history but a general theory of disasters showing why our ever more bureaucratic and complex systems are getting worse at handling them *Doom* is the lesson of history that this country indeed the West as a whole urgently needs to learn if we want to handle the next crisis better and to avoid the ultimate doom of irreversible decline
