*Comprehensive Nuclear Materials*, 2020-07-22 Materials in a nuclear environment are exposed to extreme conditions of  
radiation temperature and or corrosion and in many cases the combination of these makes the material behavior very  
different from conventional materials This is evident for the four major technological challenges the nuclear technology  
domain is facing currently i long term operation of existing Generation II nuclear power plants ii the design of the next  
generation reactors Generation IV iii the construction of the ITER fusion reactor in Cadarache France iv and the intermediate  
and final disposal of nuclear waste In order to address these challenges engineers and designers need to know the properties  
of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their  
behavior in order to assess their performance and to determine the limits of operation *Comprehensive Nuclear Materials*  
Second Edition Seven Volume Set provides broad ranging validated summaries of all the major topics in the field of nuclear  
material research for fission as well as fusion reactor systems Attention is given to the fundamental scientific aspects of  
nuclear materials fuel and structural materials for fission reactors waste materials and materials for fusion reactors The  
articles are written at a level that allows undergraduate students to understand the material while providing active  
researchers with a ready reference resource of information Most of the chapters from the first Edition have been revised and  
updated and a significant number of new topics are covered in completely new material During the ten years between the  
two editions the challenge for applications of nuclear materials has been significantly impacted by world events public  
awareness and technological innovation Materials play a key role as enablers of new technologies and we trust that this new  
edition of *Comprehensive Nuclear Materials* has captured the key recent developments Critically reviews the major classes  
and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear  
environments *Comprehensive* resource for up to date and authoritative information which is not always available elsewhere  
even in journals Provides an in depth treatment of materials modeling and simulation with a specific focus on nuclear issues
