as both an academic reference and a popular guide into the realm of chimeric cultural visions It analyzes the correlation of urban mythologies and their concurrent cultural paradigms tracing the impact of the collective subconscious through literature comic strips cinematography music architecture and art Artificial Intelligence, Co-Creation and Creativity Francisco Tigre Moura,2024-08-01 Artificial intelligence AI has deeply impacted our understanding of creativity and the human ability to generate creative outputs New applications for creative tasks are rapidly evolving and new tools are constantly being developed with much greater optimal capabilities Importantly the success of implementing such tools for creative tasks is still heavily dependent on human supervision and input Therefore it is vital to understand and critically reflect on the nature of co creative processes between humans and AI This book addresses such issues and provides insights into how humans can augment their capabilities for generating creative and innovative outputs by successfully co creating with AI The book is intentionally divided into three main parts to allow for a comprehensive and holistic perspective on human and AI co creation for creative tasks The sections are divided as follows Part 1 Principles of AI and Creativity Part 2 Critical Issues on Artificial Co Creation and Part 3 Industry Specific Discussions Consequently the book provides a holistic insight on the topic covering various issues and perspectives and enabling an accessible read to a broad audience For example chapters cover examples across different industry sectors including music arts science and management Furthermore the book covers critical questions involving copyrights ethical concerns relationship with algorithms and context based issues Only by critically reflecting on the intrinsic issues of AI and learning how to work with it effectively for creative purposes will we be able to benefit from its full potential to augment human creative abilities in an appropriate manner This novel edited collection is an essential read for scholars working on the intersection of AI creativity arts and management **Controversial Encounters in the Age of Algorithms** Sine N. Just,2024-11-27 This book explores how digital technologies shape our opinions and interactions often in ways that limit our exposure to diverse perspectives and therefore can fuel polarization Drawing on the ancient art of controversy arguing all sides of a case it offers a way to revive public debate as a source of trust and legitimacy in our society **Copyright as a Constraint on Creating Technological Value** Kasper Drazewski,2024-01-19 Can we regulate something that doesn t exist yet Can Europe create its own Silicon Valley Who gets to create technological value in today s world Whatever happened to the once flourishing idea of rags to riches Will new and exciting innovations only ever come from big tech companies Can the EU establish its own flexible framework for boosting innovation e g by facilitating the transformative use of technologies and data This book seeks to answer these questions by exploring the differences in copyright culture in Europe and the United States with its flexible fair use framework The findings are anything but obvious and decades of case law on both sides of the Atlantic tell a story of judges going to great lengths to deal with new challenges while navigating the imperfections of statutory law both where it is too broadly formulated and where it is too prescriptive How can the population s creative potential best be fostered What do

software innovations have in common with the evolution of living organisms What are the vulnerabilities of distributed creativity Answers are sought in the processes that came into being during the early years of the digital revolution and were then forced to take a back seat as control of the means of production was increasingly placed in the hands of tech companies The findings and insights presented here are highly relevant for today s digital policymaking Market concentration processes in innovation haven t ceased they are ongoing And in an age where data driven services are creating and reinforcing global oligopolies the question posed by the U S Supreme Court in Google v Oracle is now more relevant than ever who should hold the keys to digital innovation
