

Biology Chapter 17 Review Sheet

Aristotle's classification system- He classified organisms as either plants or animals. Animals were classified according to the presence or absence of red blood. They were further classified according to their habitat and morphology. Plants were classified by average size and structure as trees, herbs and shrubs.

Carl Linnaeus binomial nomenclature- Linnaeus' method of naming organisms called binomial nomenclature, gives each species a scientific name with two parts.

Taxonomy- the branch of science concerned with classification, especially of organisms

What are the four rules to writing a scientific name?

The first letter of the genus name always is capitalized, but the rest of the genus name and all letters of the species epithet are lowercase- If a scientific name is written in a printed book or magazine, it would be italicized- When a scientific name is written by hand, both parts of the name should be underlined- After the scientific name has been written completely, the genus name will be abbreviated to the first letter in later appearances.

List and define the taxonomic categories

Domain- contains kingdom

Kingdom- contains phylum

Phylum- contains class

Class- contains order

Order- contains families

Family- contains genus

Genus- contains species

Species- a group of organisms that can interbreed with each other

Taxa- a named group of organisms.

Cladistics- taxonomic method that models evolutionary relationships based on shared derived characters and phylogenetic.
