

Cells and Their Organelles

The **cell** is the basic unit of life. The following is a glossary of animal cell terms. All cells are surrounded by a **cell membrane**. The cell membrane is **semipermeable**, allowing some substances to pass into the cell and blocking others. It is composed of a double layer of **phospholipids** and **embedded proteins**. Plant cells have an additional layer surrounding them called the **cell wall**. The cell wall is made of nonliving material called cellulose. The **centrosome** (also called the "microtubule organizing center") is a small body located near the nucleus. The centrosome is where **microtubules** are made. During **cell division (mitosis)**, the centrosome divides and the two parts move to opposite sides of the dividing cell. The **centriole** is the dense center of the centrosome. Microtubules are shaped like soda straws and give the nucleus and cell its shape.

1. At what level of organization does life begin? **The cellular level**
2. What surrounds all cells? **Cell Membrane**
3. What is meant by semipermeable? **Some Substances can pass through the cell, while others are blocked**
4. What 2 things make up the cell membrane? **Phospholipids and Embedded Proteins**
5. The cell membrane is also called the P I a s m a membrane.
6. What additional layer is found around the outside of plant cells and bacteria? **Cell Wall**
