**Ludwig's Applied Process Design for Chemical and Petrochemical Plants** A. Kayode Coker, 2010-07-19 The Fourth Edition of Applied Process Design for Chemical and Petrochemical Plants Volume 2 builds upon the late Ernest E Ludwig's classic chemical engineering process design manual. Volume Two focuses on distillation and packed towers and presents the methods and fundamentals of plant design along with supplemental mechanical and related data nomographs, data charts, and heuristics. The Fourth Edition is significantly expanded and updated with new topics that ensure readers can analyze problems and find practical design methods and solutions to accomplish their process design objectives. A true application-driven book providing clarity and easy access to essential process plant data and design information. Covers a complete range of basic day-to-day petrochemical operation topics. Extensively revised with new material on distillation process performance, complex mixture fractionating, gas processing, dehydration, hydrocarbon absorption and stripping, enhanced distillation types.

**Ludwig's Applied Process Design for Chemical and Petrochemical Plants Incorporating Process Safety Incidents** A. Kayode Coker, 2024-07-10 Ludwig's Applied Process Design for Chemical and Petrochemical Plants Incorporating Process Safety Incidents is ever-evolving, starting with the first edition some 60 years ago. The volumes in this fifth edition provide improved techniques and fundamental design methodologies to guide the practicing engineer in designing process equipment and applying chemical processes to the properly detailed hardware. As indicative of the new title, process safety incidents are incorporated in many of the chapters, reviewing the root causes and how these could be mitigated in the future. Like its predecessor, this new edition continues to present updated information for achieving optimum operational and process conditions and to avoid problems caused by inadequate sizing and lack of internally detailed hardware. The volumes provide both fundamental theories where applicable and direct application of these theories to applied equations essential in the design effort. This approach in presenting design information is essential for troubleshooting process equipment and in executing system performance analysis. Volume 1B continues to cover mixing of liquids, process safety and pressure-relieving devices, metallurgy and corrosion, and process optimization. It builds upon Ernest E Ludwig's classic text to further enhance its use as a chemical engineering process design manual of methods and proven fundamentals. This new edition includes new content on three-phase separation, mixing of liquids, ejectors, and mechanical vacuum systems, process safety and pressure-relieving devices, metallurgy and corrosion, and optimization of chemical process blending. Some chapters review pressure-relieving devices and provide case studies for process safety incidents which are well illustrated from the US Chemical Safety Hazard Investigation Board ([www.csb.gov](http://www.csb.gov)). Finally, this book contains a glossary of Petroleum and Petrochemical Terminologies and Physical and Chemical Characteristics of Major Hydrocarbons. Provides improved design manual for methods and proven fundamentals of process design with related data and charts. Covers complete range of basic day-to-day petrochemical

operation topics Extensively revised with new material added on three phase separation metallurgy and corrosion Process safety management HAZOP and hazard analyses and optimization of chemical process blending Presents many examples using Honeywell UniSim Design software developed and executable computer programs and Excel spreadsheet programs Includes case studies of process safety incidents guidance for troubleshooting and checklists Includes Software of Conversion Table and 30 process data sheets in excel format

Fuzzy Cognitive Maps for Applied Sciences and Engineering Elpiniki I. Papageorgiou,2013-12-02 Fuzzy Cognitive Maps FCM constitute cognitive models in the form of fuzzy directed graphs consisting of two basic elements the nodes which basically correspond to concepts bearing different states of activation depending on the knowledge they represent and the edges denoting the causal

effects that each source node exercises on the receiving concept expressed through weights. Weights take values in the interval  $[-1, 1]$  which denotes the positive, negative, or neutral causal relationship between two concepts. An FCM can be typically obtained through linguistic terms inherent to fuzzy systems but with a structure similar to the neural networks which facilitates data processing and has capabilities for training and adaptation. During the last 10 years, an exponential growth of published papers in FCMs was followed, showing great impact potential. Different FCM structures and learning schemes have been developed while numerous studies report their use in many contexts with highly successful modeling results. The aim of this book is to fill the existing gap in the literature concerning fundamentals, models, extensions, and learning algorithms for FCMs in knowledge engineering. It comprehensively covers the state of the art FCM modeling and learning methods with algorithms, codes, and software tools and provides a set of applications that demonstrate their various usages in applied sciences and engineering.

**Process Control and Management** P.L. Lee, R.B. Newell, I.T. Cameron, 1998. The purpose of this book is to provide a balanced introduction to process control and management aimed at the general process engineer. Rapid changes have occurred in process control over the past decade, mainly because of the deployment of robust and effective digital control equipment and the development of the models which underpin the area. Historically, process control was seen as simply the maintenance of particular process variables at appropriate setpoints. This very narrow view has been superseded by the view that process control involves the regulation of any given process in the context of a complete processing plant to maximise the economic return from the plant. This wider definition brings into play a range of control regimes from basic regulatory control through advanced regulatory control to complex process management. The organization of the book reflects this hierarchy and is thus split into 3 parts covering basic regulatory control, advanced process control, and finally process management. The book is completed by the inclusion of several useful appendices covering mathematical modelling, process optimisation, and simulation.

**Soft Computing in Engineering Design and Manufacturing** Pravir K. Chawdhry, Rajkumar Roy, Raj K. Pant, 2012-12-06. Soft Computing has emerged as an important approach towards achieving intelligent computational paradigms where key elements are learning from experience in the presence of uncertainties, fuzzy belief functions, and evolution of the computing strategies of the learning agent itself. Fuzzy neural and evolutionary computing are the three major themes of soft computing. The book presents original research papers dealing with the theory of soft computing and its applications in engineering design and manufacturing. The methodologies have been applied to a large variety of real-life problems. Application of soft computing has provided the opportunity to integrate human-like vagueness and real-life uncertainty to an otherwise hard computer programme. Now a computer programme can learn, adapt, and evolve.

using soft computing The book identifies the strengths and limitations of soft computing techniques particularly with reference to their engineering applications The applications range from design optimisation to scheduling and image analysis Goal optimisation with incomplete information and under uncertainty is the key to solving real life problems in design and manufacturing Soft computing techniques presented in this book address these issues Computational complexity and efficient implementation of these techniques are also major concerns for realising useful industrial applications of soft computing The different parts in the book also address these issues The book contains 9 parts 8 of which are based on papers from the 2nd On line World Conference on Soft Computing in Engineering Design and Manufacture WSC2

**Artificial Intelligence, Expert Systems, and Symbolic Computing** Elias N. Houstis, John Richard Rice, 1992 This volume contains papers in the areas of artificial intelligence expert systems symbolic computing and applications to scientific computing Together they provide an excellent overview of the dynamic state of these closely related fields They reveal a future where scientific computation will increasingly involve symbolic and artificial intelligence tools as these software systems become more sophisticated also a future where systems of computational science and engineering will be problem solving environments created with components from numerical analysis computational geometry symbolic computing and artificial intelligence
