## NUMBER & CHARACTER

**Integer**  
 The integer data type represents whole numbers, both positive and negative. It is the most common data type used in C++ programs. The range of values that can be stored in an integer depends on the compiler and the platform. For example, on a 32-bit system, the range is typically from -2,147,483,648 to 2,147,483,647.

**Character**  
 The character data type represents a single character, such as a letter, digit, or symbol. It is typically stored as a byte of memory. The range of values that can be stored in a character depends on the compiler and the platform. For example, on a 32-bit system, the range is typically from 0 to 255.

**Short Integer**  
 The short integer data type represents whole numbers, both positive and negative. It is typically used when memory space is a concern. The range of values that can be stored in a short integer depends on the compiler and the platform. For example, on a 32-bit system, the range is typically from -32,768 to 32,767.

**Long Integer**  
 The long integer data type represents whole numbers, both positive and negative. It is typically used when a larger range of values is needed. The range of values that can be stored in a long integer depends on the compiler and the platform. For example, on a 32-bit system, the range is typically from -9,223,372,036,854,775,808 to 9,223,372,036,854,775,807.

**Unsigned Integer**
