What is a rock?

A rock is a naturally formed solid made up of one or more minerals. Rocks can have many different colors! The colors represent the different minerals that make up the rock.

What is a mineral?

A mineral is a solid object that is formed in nature and has never been alive. A mineral is made up of one material and is the same all the way through. They are normally the same color all the way through.

How do I describe rocks and minerals?

Color - you can see that different kinds of rocks have different colors. The color comes from the minerals in the rock. Color is one of the easiest ways for a scientist to tell minerals apart!

Hardness - Rocks and minerals are different hardnesses. Hardness is the measure of how difficult it is for a mineral to be scratched. We test the hardness of rocks and minerals using a scratch test. Mohs scale is a tool scientists use to tell the hardness of a mineral.

Texture - You can see or feel tiny pieces of minerals in rocks. These pieces are called grains. A rock's texture is the size and shape of its grains. You can feel texture. We describe rock texture as rough or smooth.

Size - rocks and minerals can be ANY size.

Shape - rocks and minerals can be ANY shape.
