Clough, Joseph Penzien, 1975 **Proceedings of the Fourth World Conference on Floating Solutions: WCFS 2024; 2-4 December; Hong Kong** Xiao Lin Zhao, Jian-Guo Dai, Siwei Liu, Soon Heng Lim, 2025-06-24 This book highlights recent research and development in floating solutions for sustainable ocean development and blue economy It covers the following key topics Architecture climate change and disaster environmental enhancement food security and food sustainability innovation and technology renewable energy urban planning policy social acceptance and legal matters This book is of interest to architectures engineers consultants manufactures government officials researchers academics and postgraduate students related to floating solutions **Computational Geomechanics** Andrew H. C. Chan, Manuel Pastor, Bernhard A. Schrefler, Tadahiko Shiomi, Olgierd C. Zienkiewicz, 2022-04-04

COMPUTATIONAL GEOMECHANICS The new edition of the first book to cover the computational dynamic aspects of geomechanics now including more practical applications and up to date coverage of current research in the field Advances in computational geomechanics have dramatically improved understanding of the behavior of soils and the ability of engineers to design increasingly sophisticated constructions in the ground When Professor Olek Zienkiewicz began the application of numerical approaches to solid dynamics at Swansea University it became evident that realistic prediction of the behavior of soil masses could only be achieved if the total stress approaches were abandoned Computational Geomechanics introduces the theory and application of Zienkiewicz s computational approaches that remain the basis for work in the area of saturated and unsaturated soil to this day Written by past students and colleagues of Professor Zienkiewicz this extended Second Edition provides formulations for a broader range of problems including failure load under static loading saturated and unsaturated consolidation hydraulic fracturing and liquefaction of soil under earthquake loading The internationally recognized team of authors incorporates current computer technologies and new developments in the field particularly in the area of partial saturation as they guide readers on how to properly apply the formulation in their work This one of a kind volume Explains the Biot Zienkiewicz formulation for saturated and unsaturated soil Covers multiple applications to static and dynamic problems for saturated and unsaturated soil in areas such as earthquake engineering and fracturing of soils and rocks Features a completely new chapter on fast catastrophic landslides using depth integrated equations and smoothed particle hydrodynamics with applications Presents the theory of porous media in the saturated and unsaturated states to establish the foundation of the problem of soil mechanics Provides a quantitative description of soil behavior including simple plasticity models generalized plasticity and critical state soil mechanics Includes numerous questions problems hands on experiments applications to other situations and example code for GeHoMadrid Computational Geomechanics Theory and Applications Second Edition is an ideal textbook for specialist and general geotechnical postgraduate courses and a must have reference for researchers in geomechanics and geotechnical engineering for software developers and users of

A Contribution to Moving Force Identification in Bridge Dynamics Andrei Firus, 2023-02-13

The knowledge of the real forces acting on a structure are of great importance in the condition assessment process of existing structures In this sense this work provides a novel approach for identification of dynamic moving forces acting on a bridge structure It seeks to find the optimal time dependent force values that minimize the difference between the computed and measured displacement and acceleration time histories for a limited number of sensor locations The work also presents extensive experimental investigations of the developed method on real structures in operation which consistently show that it can be successfully used on a wide range of applications from small structures excited by rather low pedestrian forces up to the heavy category of a complete train passing a railway bridge In this context a set of particularities and limitations arising in the practical application of the method on real structures are also discussed
