Optimal Trajectory Planning and Train Scheduling for Urban Rail Transit Systems

Yihui Wang, Bin Ning, Ton van den Boom, Bart De Schutter, 2016-04-21 This book contributes to making urban rail transport fast punctual and energy efficient significant factors in the importance of public transportation systems to economic environmental and social requirements at both municipal and national levels It proposes new methods for shortening passenger travel times and for reducing energy consumption addressing two major topics 1 train trajectory planning the authors derive a nonlinear model for the operation of trains and present several approaches for calculating optimal and energy efficient trajectories within a given schedule and 2 train scheduling the authors develop a train scheduling model for urban rail systems and optimization approaches with which to balance total passenger travel time with energy efficiency and other costs to the operator Mixed integer linear programming and pseudospectral methods are among the new methods proposed for single and multi train systems for the solution of the nonlinear trajectory planning problem which involves constraints such as varying speed restrictions and maximum traction braking force Signaling systems and their effects are

also accounted for in the trajectory planning model Origin destination passenger demand is included in the model formulation for train scheduling Iterative convex programming and efficient bi level approaches are utilized in the solution of the train scheduling problem In addition the splitting rates and route choices of passengers are also optimized from the system point of view The problems and solutions described in Optimal Trajectory Planning and Train Scheduling for Urban Rail Transit Systems will interest researchers studying public transport systems and logistics whether from an academic or practitioner background as well as providing a real application for anybody studying optimization theory and predictive control

Shell and Spatial Structures Stefano Gabriele,Amedeo Manuello Bertetto,Francesco Marmo,Andrea Micheletti,2023-10-31 This volume collects the latest advances innovations and applications in the field of shell and spatial structures as presented by leading international researchers at the 2nd Italian Workshop on Shell and Spatial Structures IWSS held in Turin Italy on June 26 28 2023 The conference was meant to give an overview on experimental and theoretical studies analysis methods and approaches for the design computational form finding structural optimization manufacturing testing and maintenance techniques and historical reviews of all types of shell and spatial structures These include but are not limited to tension and membrane structures framed and lattice structures gridshells and active bending structures shell roofs tensegrity structures pneumatic and inflatable structures active and deployable structures concrete metal masonry timber and bio based spatial structures The contributions which were selected by means of a rigorous international peer review process present a wealth of exciting ideas that will open novel research directions and foster multidisciplinary collaboration among different specialists *Advances in Materials Processing and Manufacturing Applications* Amar Patnaik,Ernst Kozeschnik,Vikas Kukshal,2021-06-22 This book presents selected papers from the International Conference on Advances in Materials Processing and Manufacturing Applications iCADMA 2020 held on November 5 6 2020 at Malaviya National Institute of Technology Jaipur India iCADMA 2020 proceedings is divided into four topical tracks Advanced Materials Materials Manufacturing and Processing Engineering Optimization and Sustainable Development and Tribology for Industrial Application **Solving Optimization Problems with the Heuristic Kalman Algorithm** Rosario

Toscano,2024-03-21 This text focuses on simple and easy to use design strategies for solving complex engineering problems that arise in several fields of engineering design namely non convex optimization problems The main optimization tool used in this book to tackle the problem of nonconvexity is the Heuristic Kalman Algorithm HKA The main characteristic of HKA is the use of a stochastic search mechanism to solve a given optimization problem From a computational point of view the use of a stochastic search procedure appears essential for dealing with non convex problems The topics discussed in this monograph include basic definitions and concepts from the classical optimization theory the notion of the acceptable solution machine learning the concept of preventive maintenance and more The Heuristic Kalman Algorithm discussed in this book applies to many fields such as robust structured control electrical engineering mechanical engineering machine learning

reliability and preference models This large coverage of practical optimization problems makes this text very useful to those working on and researching systems design The intended audience includes industrial engineers postgraduates and final year undergraduates in various fields of systems design Advances in Design Automation, 1988 S.
