Development R. Keith Sawyer, Vera John-Steiner, Seana Moran, Robert J. Sternberg, David Henry Feldman, Howard Gardner, Jeanne Nakamura, Mihaly Csikszentmihalyi, 2003-09-04 What is creativity and where does it come from Creativity and Development explores the fascinating connections and tensions between creativity research and developmental psychology two fields that have largely progressed independently of each other until now In this book scholars influential in both fields explore the emergence of new ideas and the development of the people and situations that bring them to fruition The uniquely collaborative nature of Oxford's Counterpoints series allows them to engage in a dialogue addressing the key issues and potential benefits of exploring the connections between creativity and development Creativity and Development is based on the observation that both creativity and development are processes that occur in complex systems in which later stages or changes emerge from the prior state of the system In the 1970s and 1980s creativity researchers shifted their focus from personality traits to cognitive and social processes and the co authors of this volume are some of the most influential figures in this shift The central focus on system processes results in three related volume themes how the outcomes of creativity and development emerge from dynamical processes the interrelation between individual processes and social processes and the role of mediating artifacts and domains in developmental and creative processes The chapters touch on a wide range of important topics with the authors drawing on their decades of research into creativity and development Readers will learn about the creativity of children's play the creative aspects of children's thinking the creative processes of scientists the role of education and teaching in creative development and the role of multiple intelligences in both creativity and development The final chapter is an important dialogue between the authors who engage in a roundtable discussion and explore key questions facing contemporary researchers such as Does society suppress children's creativity Are creativity and development specific to an intelligence or a domain What role do social and cultural contexts play in creativity and development Creativity and Development presents a powerful argument that both creativity scholars and developmental psychologists will benefit by becoming more familiar with each other's work

The Routledge International Handbook of Creative Cognition Linden J. Ball, Frédéric Vallée-Tourangeau, 2023-08-31 The Routledge International Handbook of Creative Cognition is an authoritative reference work that offers a well balanced overview of current scholarship across the full breadth of the rapidly expanding field of creative cognition It contains 43 chapters written by world leading researchers covering foundational issues and concepts as well as state of the art research developments The handbook draws extensively on contemporary work exploring the cognitive representations and processes associated with creativity whether studied in the laboratory or as it arises in real world practice in domains such as education art science entrepreneurship design and technological innovation Chapters also examine the sociocognitive and cultural aspects of creativity in teams and organisations while additionally capturing the latest research on the cognitive neuroscience of creativity Providing a compelling synopsis of emerging trends and debates in the field of creative cognition and positioning these in relation to

Exploring Transdisciplinarity in Art and Sciences Zoï Kapoula, Emmanuelle Volle, Julien Renoult, Moreno

Andreatta, 2018-08-20 The book is organized around 4 sections The first deals with the creativity and its neural basis responsible editor Emmanuelle Volle The second section concerns the neurophysiology of aesthetics responsible editor Zo Kapoula It covers a large spectrum of different experimental approaches going from architecture to process of architectural creation and issues of architectural impact on the gesture of the observer Neurophysiological aspects such as space navigation gesture body posture control are involved in the experiments described as well as questions about terminology and valid methodology The next chapter contains studies on music mathematics and brain responsible editor Moreno Andreatta The final section deals with evolutionary aesthetics responsible editor Julien Renoult Chapter Composing Music from Neuronal Activity The Spikiss Project is available open access under a Creative Commons Attribution NonCommercial 4 0 International License via link springer.com [Engineering Education](#) John Heywood, 2006-01-24 A synthesis of nearly 2 000 articles to help make engineers better educators While a significant body of knowledge has evolved in the field of engineering education over the years much of the published information has been restricted to scholarly journals and has not found a broad audience This publication rectifies that situation by reviewing the findings of nearly 2 000 scholarly articles to help engineers become better educators devise more effective curricula and be more effective leaders and advocates in curriculum and research development The author s first objective is to provide an illustrative review of research and development in engineering education since 1960 His second objective is with the examples given to encourage the practice of classroom assessment and research and his third objective is to promote the idea of curriculum leadership The publication is divided into four main parts Part I demonstrates how the underpinnings of education history philosophy psychology

sociology determine the aims and objectives of the curriculum and the curriculum's internal structure which integrates assessment content teaching and learning Part II focuses on the curriculum itself considering such key issues as content organization trends and change A chapter on interdisciplinary and integrated study and a chapter on project and problem based models of curriculum are included Part III examines problem solving creativity and design Part IV delves into teaching assessment and evaluation beginning with a chapter on the lecture cooperative learning and teamwork The book ends with a brief insightful forecast of the future of engineering education Because this is a practical tool and reference for engineers each chapter is self contained and may be read independently of the others Unlike other works in engineering education which are generally intended for educational researchers this publication is written not only for researchers in the field of engineering education but also for all engineers who teach All readers acquire a host of practical skills and knowledge in the fields of learning philosophy sociology and history as they specifically apply to the process of engineering curriculum improvement and evaluation

Creativity, Cognition, and Knowledge Terry Dartnall, 2002-06-30 This collection written by leading figures in cognitive science includes their lively debates with Dartnall about his call for a new epistemology an alternative to the standard representational story in cognitive science Dartnall aims to show that new epistemology is already with us in some leading edge models of human creativity Such an epistemology steers a middle road between the representationism of classical cognitive science and a radical anti representationism that denies the existence or importance of representations Dartnall who debates contributors at each chapter's end believes that creativity inheres not only in big ticket items such as plays poems or sonatas but in our ability to produce cognitive content at all so that representations are the creative products of our knowledge rather than its passive carriers
