

Lab Questions

1. Why are pig hearts used to study the anatomy of the human heart?

- **The pig heart is used because it is very similar to the human heart in structure, size, & function. Pig hearts are a great way to get an idea of the anatomy of human hearts because they are very similar in size, structure, and function. Like human hearts, pig hearts consist of four chambers (two atriums and two ventricles). They also have four valves and an aorta, just like humans.**

2. How can you tell which side of the heart is the ventral surface?

- **The front of the heart is recognized by a groove that extends from the right side of the broad end of the heart diagonally to a point above & to your left of the apex.**

3. How many chambers are found in the heart? What other group of organisms would have this same number of chambers?

- **There are 4 chambers found in the heart. . The heart of a bird or mammal has two atria and two completely separated ventricles.**

5. Which chambers are the pumping chambers of the heart?

- **The lower chambers — the right and left ventricles — pump blood out of your heart.**

6. Which chambers are the receiving chambers of the heart?

- **The upper chambers — the right and left atria — receive incoming blood.**

7. How do the walls of the atria compare with the walls of the ventricles and why are they different?

- **The two atria are thin-walled chambers that receive blood from the veins. The two ventricles are thick-walled chambers that forcefully pump blood out of the heart.**

8. What is the purpose of heart valves?

- **The valves prevent the backward flow of blood. These valves are actual flaps that are located on each end of the two ventricles (lower chambers of the heart). They act as one-way inlets of blood on one side of a ventricle and one-way outlets of blood on the other side of a ventricle.**
