Slide 1: Interaction Design as an Interdisciplinary Research Mindset

Hello everyone, thanks a lot for inviting me to this summit. I've been really looking forward to it and it's great to be here meeting all of you. My talk is about Interaction Design as an interdisciplinary research mindset, a topic I am very interested in as I have been working in this field for quite some time now. So please allow me to share my position on what interaction design is all about.

Interaction Design is about designing the parameters which frame the interactions between us, space and things.

Slide 2: Interaction Design is about designing the parameters which frame the interactions between us, space and things.

Interaction design is about designing the parameters that frame the interactions between us, space and things. A game of chess helps to illustrate what I mean. First of all, we can't design the interactions between the players in detail. It's all based on their knowledge, experiences and skills. We may have an idea of how they will play, but at the end of the day it's not possible to predict the outcome. What we can do is design the artefacts, rules and mental models needed to play a game of chess. First there are the chess pieces. Here we can shape the figures in great detail, as it is of course important to distinguish between the queen and the king. As well as basic recognisability, we can also consider aesthetic qualities for these pieces. In other words, the chess pieces represent the products in interaction design.

Interdisciplinary Interaction Design James Pannafino, 2018-02 **Interdisciplinary Interaction Design** James Pannafino, 2012 Interaction design has many dimensions to it It addresses how people deal with words read images explore physical space think about time and motion and how actions and responses affect human behavior Various disciplines make up interaction design such as industrial design cognitive psychology user interface design and many others It is my hope that this book is a starting point for creating a visual language to enhance the understanding of interdisciplinary theories within interaction design The book uses concise descriptions visual metaphors and comparative diagrams to explain each term s meaning Many ideas in this book are based on timeless principles that will function in varying contexts Provided by author

Interactive Media: The Semiotics of Embodied Interaction Shaleph O'Neill, 2008-09-18 The author discusses the existing theoretical approaches of semiotically informed research in HCI what is useful and the limitations He proposes a radical rethink to this approach through a re evaluation of important semiotic concepts and applied semiotic methods Using a semiotic model of interaction he explores this concept through several studies that help to develop his argument He concludes that this semiotics of interaction is more appropriate than other versions because it focuses on the characteristics of interactive media as they are experienced and the way in which users make sense of them rather than thinking about interface design or usability issues

Bridging Disciplines in the Brain, Behavioral, and Clinical Sciences Institute of Medicine, Division of Neuroscience and Behavioral Health, Committee on Building Bridges in the Brain, Behavioral, and Clinical Sciences, 2000-08-24 Interdisciplinary research is a cooperative effort by a team of investigators each an expert in the use of different methods and concepts who have joined in an organized program to attack a challenging problem Each investigator is responsible for the research in their area of discipline that applies to the problem but together the investigators are responsible for the final product The need for interdisciplinary training activities has been detailed over the last 25 years in both public and private reports The history of science and technology has even shown the important advances that arose from interdisciplinary research including plate tectonics which brought together geologists oceanographers paleomagnetists seismologists and geophysicists to advance the ability to forecast earthquakes and volcanic eruptions In recognition of this the need to train scientists who can address the highly complex problems that challenge us today and fully use new knowledge and technology and the fact that cooperative efforts have proved difficult the National Institute of Mental Health NIMH the National Institutes of Health NIH Office of Behavioral and Social Sciences Research OBSSR the National Institute on Nursing Research NINR and the National Institute on Aging NIA requested that an Institute of Medicine IOM Committee be created to complete several tasks including examining the needs and strategies for interdisciplinary training in the brain behavioral social and clinical sciences defining necessary components of true interdisciplinary training in these areas and reviewing current educational and training programs to identify elements of

model programs that best facilitate interdisciplinary training Bridging Disciplines in the Brain Behavioral and Clinical Sciences provides the conclusions and recommendations of this committee Due to evaluations of the success of interdisciplinary training programs are scarce the committee could not specify the necessary components or identify the elements that best facilitate interdisciplinary training However after reviewing existing programs and consulting with experts the committee identified approaches likely to be successful in providing direction for interdisciplinary endeavors at various career stages This report also includes interviews training programs and workshop agendas used
