**Introduction to Natural and Man-made Disasters and Their Effects on Buildings** Roxanna McDonald, 2007-06-01 This is a comprehensive guide to all types of natural and man made disasters and their effect on buildings It gives overall guidance and a basic technical understanding of prevention mitigation and management of disaster and outlines a checklist of preventive design elements for each situation Every category is illustrated with a case study which pin points the essential information that is crucial to architects and engineers in designing buildings with disaster prevention in mind The aim of the book is to give a clear understanding of the nature of events and problems and to enable readers to respond with knowledge to the unique demands placed on their designs A special emphasis is also placed on re building as an opportunity to start again For the specialists this is a process of constant learning and improving techniques in the light of events past

**Geospatial Analysis and Modelling of Urban Structure and Dynamics** Bin Jiang, Xiaobai Yao, 2010-06-16 A Coming of Age Geospatial Analysis and Modelling in the Early Twenty First Century Forty years ago when spatial analysis first emerged as a distinct theme within geography s quantitative revolution the focus was largely on consistent methods for measuring spatial correlation The concept of spatial au correlation took pride of place mirroring concerns in time series analysis about similar kinds of dependence known to distort the standard probability theory used to derive appropriate statistics Early applications of spatial correlation tended to reflect geographical patterns expressed as points The perspective taken on such analytical thinking was founded on induction the search for pattern in data with a view to suggesting appropriate hypotheses which could subsequently be tested In parallel but using very different techniques came the development of a more deductive style of analysis based on modelling and thence simulation Here the focus was on translating prior theory into forms for generating testable predictions whose outcomes could be compared with observations about some system or phenomenon of interest In the intervening years spatial analysis has broadened to embrace both inductive and deductive approaches often

combining both in different mixes for the variety of problems to which it is now applied

**Expanding Boundaries: Systems Thinking in the Built Environment** Guillaume Habert, Arno Schlueter, 2016-08-15 Consuming over 40% of total primary energy the built environment is in the centre of worldwide strategies and measures towards a more sustainable future To provide resilient solutions a simple optimisation of individual technologies will not be sufficient In contrast whole system thinking reveals and exploits connections between parts Each system interacts with others on different scales materials components buildings cities and domains ecology economy and social Whole system designers optimize the performance of such systems by understanding interconnections and identifying synergies The more complete the design integration the better the result In this book the reader will find the proceedings of the 2016 Sustainable Built Environment SBE Regional Conference in Zurich Papers have been written by academics and practitioners from all continents to bring forth the latest understanding on systems thinking in the built environment *International Journal of Risk Assessment and Management* ,2005
