**Econometric Models with Panel Data Across Stata** Econometric

Books,2015-10-23 The data panels are a special type of samples in which the behavior of a certain number of economic agents is followed over time In this way the researcher can perform economic analysis and specify models with the data of cross section that are obtained when all operators are considered in an instant of time Different patterns of behaviour of all agents together studied in the different temporal moments may thus be assessed Alternatively you can perform the same analysis considering time series given by the evolution of each economic agent throughout all the periods of the sample This book explores the panel data econometrics through STATA The content is de next
