A History of Fake Things on the Internet Walter Scheirer, 2023-12-05 A Next Big Idea Club Must Read for December 2023

As all aspects of our social and informational lives increasingly migrate online the line between what is real and what is digitally fabricated grows ever thinner and that fake content has undeniable real world consequences A History of Fake Things on the Internet takes the long view of how advances in technology brought us to the point where faked texts images and video content are nearly indistinguishable from what is authentic or true Computer scientist Walter J Scheirer takes a deep dive into the origins of fake news conspiracy theories reports of the paranormal and other deviations from reality that have become part of mainstream culture from image manipulation in the nineteenth century darkroom to the literary stylings of large language models like ChatGPT Scheirer investigates the origins of Internet fakes from early hoaxes that traversed the globe via Bulletin Board Systems BBSs USENET and a new messaging technology called email to today s hyperrealistic AI generated Deepfakes An expert in machine learning and recognition Scheirer breaks down the technical advances that made new developments in digital deception possible and shares behind the screens details of early Internet era pranks that have become touchstones of hacker lore His story introduces us to the visionaries and mischief makers who first deployed digital fakery and continue to influence how digital manipulation works and doesn t today computer hackers digital artists media forensics specialists and AI researchers Ultimately Scheirer argues that problems associated with fake content are not intrinsic properties of the content itself but rather stem from human behavior demonstrating our capacity for both creativity

**Knowledge-based Systems for General Reference Work** John V. Richardson,1995 By focusing on knowledge based  
systems technology the primary purpose and goal of this book is to improve the quality of reference service rendered in  
libraries Within reference service this book examines question answering a complex and difficult task For those interested in  
the theoretical aspects of reference work they have to look no further than the first chapter In addition the book features  
theoretical chapters on modelling the reference transaction a chapter on the logic of ready reference work and a chapter on  
the appropriate criteria to apply in selecting an expert system shell Several practical chapters focus on what KBS work has  
already been done in the field and evaluate nearly fifty expert system development shells so that readers can select the most  
appropriate shell for their domain The subtitle of the book is applications problems and progress in regard to expert systems  
in reference work Applications are covered most clearly in chapter 8 which reviews the more than extant prototypes Chapter  
3 covers what is feasible chapter 4 models the reference transaction and chapter 7 covers interface issues so that future  
applications can be more successful Problems are covered throughout the book starting with chapter 1 which discusses the  
traditional emphasis on reference sources It argues that the field needs to shift toward procedural knowledge related to work  
in reference departments The chapter on expert system feasibility reveals that there are alternative ways of conceptualizing  
the intellectual work of an expert and of course chapter 9 directly points out limitations in extant systems Encouraging words  
occur in chapter 1 about the shift to a balanced or complete paradigm for doing reference work Similarly the chapter on  
modelling is optimistic in that reference work can be modelled and systems implemented which act like human experts The  
final chapter tries to avoid the technological optimism inherent in many books on expert systems by identifying the near term  
factors which will influence the development of expert systems Key Features Historical background presenting the field s  
paradigmatic thinking Decision trees for basic formats of reference material Flowchart modelling the reference transaction  
Reviews of more than fifty extant KBS in general reference environments Evaluative criteria on more than forty expert
