Reinforced Concrete Design of Tall Buildings Bungale S. Taranath, 2009-12-14 An exploration of the world of concrete as it applies to the construction of buildings Reinforced Concrete Design of Tall Buildings provides a practical perspective on all aspects of reinforced concrete used in the design of structures with particular focus on tall and ultra tall buildings Written by Dr Bungale S Taranath this work explains t

Tall Building Design Bungale S. Taranath, 2016-10-04 Addresses the Question Frequently Proposed to the Designer by Architects Can We Do This Offering guidance on how to use code based procedures while at the same time providing an understanding of why provisions are necessary Tall Building Design Steel Concrete and Composite Systems methodically explores the structural behavior of steel concrete and composite members and systems This text establishes the notion that design is a creative process and not just an execution of framing proposals It cultivates imaginative approaches by presenting examples specifically related to essential building codes and standards Tying together precision and accuracy it also bridges the gap between two design approaches one based on initiative skill and the other based on computer skill The book explains loads and load combinations typically used in building design explores methods for determining design wind loads using the provisions of ASCE 7 10 and examines wind tunnel procedures It defines conceptual seismic design as the avoidance or minimization of problems created by the effects of seismic excitation It introduces the concept of performance based design PBD It also addresses serviceability considerations prediction of tall building motions damping devices seismic isolation blast resistant design and progressive collapse The final chapters explain gravity and lateral systems for steel concrete and composite buildings The Book Also Considers Preliminary analysis and design techniques The structural rehabilitation of seismically vulnerable steel and concrete buildings Design differences between code sponsored approaches The concept of ductility trade off for strength Tall Building Design Steel Concrete and Composite Systems is a structural design guide and reference for practicing engineers and educators as well as recent graduates entering the structural engineering profession This text examines all major concrete steel and composite building systems and uses the most up to date building codes

Tall buildings fib Fédération internationale du béton, 2014-08-01 fib Bulletin 73 Tall Buildings is the result of a collaboration between the fib and MPA The Concrete Centre UK Task Group 1 6 High rise buildings within fib Commission 1 Structures was drawn together with a mandate to write about the experience and know how pertinent to the development design and construction of tall concrete buildings The group s findings are presented in this state of the art report Tall buildings are a unique challenge to engineers even to those with extensive experience of low rise structures The bulletin explains the critical interfaces with other professionals for example architects building services engineers fa ade and lift specialists geotechnical engineers and wind specialists highlighting how these parties interact with engineers and can influence and guide the development of the structural solution The key factors in choosing the most appropriate structural system are discussed The bulletin covers the criteria used to

select the most economical structural elements including the foundations the vertical elements and the floor slabs Examples of common construction methods are presented and their effects on the structural engineering design are discussed Tall buildings can undergo significant deformation during their construction and service life These movements need to be understood by the designer and potentially compensated for in the design and during construction One of the main particularities of the design of tall buildings is the dominance of the lateral loading from wind and seismic actions The bulletin provides a discussion of these important topics and sets out the current approach taken by experienced engineers Designers of tall buildings also need to understand the dynamic behaviour of the structure and confine the motion of the building to within acceptable limits Approaches to damping and dynamic performance are discussed and guidance provided on the appropriate occupant comfort limits

Cast-in-place Concrete in Tall Building Design and Construction L. G. Aycardi, Mehdi Saiidi, 1992 This book describes all aspects of cast in place concrete design and construction and presents several innovative state of the art techniques that will challenge the ways engineers have traditionally approached such tall building projects Some of the important issues covered include an in depth discussion of construction loads including material shoring and reshoring new materials and techniques including fibre reinforced and high strength concrete structural analysis alternate design methods This book may be of interest to structural and construction engineers working on the design of tall buildings using cast in place concrete

Tall Buildings Mehmet Günel, Hüseyin Ilgin, 2014-06-27 The structural challenges of building 800 metres into the sky are substantial and include several factors which do not affect low rise construction This book focusses on these areas specifically to provide the architectural and structural knowledge which must be taken into account in order to design tall buildings successfully In presenting examples of steel reinforced concrete and composite structural systems for such buildings it is shown that wind load has a very important effect on the architectural and structural design The aerodynamic approach to tall buildings is considered in this context as is earthquake induced lateral loading Case studies of some of the world's most iconic buildings illustrated with full colour photographs structural plans and axonometrics will bring to life the design challenges which they presented to architects and structural engineers The Empire State Building the Burj Khalifa Taipei 101 and the HSB Turning Torso are just a few examples of the buildings whose real life specifications are used to explain and illustrate core design principles and their subsequent effect on the finished structure

Tall Building Structures Bryan Stafford Smith, Alex Coull, 1991-07-17 Examines structural aspects of high rise buildings particularly fundamental approaches to the analysis of the behavior of different forms of building structures including frame shear wall tubular core and outrigger braced systems Introductory chapters discuss the forces to which the structure is subjected design criteria which are of the greatest relevance to tall buildings and various structural forms which have developed over the years since the first skyscrapers were

built at the turn of the century A major chapter is devoted to the modeling of real structures for both preliminary and final analyses Considerable attention is devoted to the assessment of the stability of the structure and the significance of creep and shrinkage is discussed A final chapter is devoted to the dynamic response of structures subjected to wind and earthquake forces Includes both accurate computer based and approximate methods of analysis **Proceedings:**
