Unfortunately, people tend to be terrible forecasters. As Wharton professor Philip Tetlock showed in a landmark 2005 study, even experts' predictions are only slightly better than chance. However, an important and underreported conclusion of that study was that some experts do have real foresight, and Tetlock has spent the past decade trying to figure out why. What makes some people so good? And can this talent be taught? In *Superforecasting*, Tetlock and coauthor Dan Gardner offer a masterwork on prediction, drawing on decades of research and the results of a massive government-funded forecasting tournament. The Good Judgment Project involves tens of thousands of ordinary people, including a Brooklyn filmmaker, a retired pipe installer, and a former ballroom dancer, who set out to forecast global events. Some of the volunteers have turned out to be astonishingly good. They've beaten other benchmarks, competitors, and prediction markets. They've even beaten the collective judgment of intelligence analysts with access to classified information. They are superforecasters. In this groundbreaking and accessible book, Tetlock and Gardner show us how we can learn from this elite group. Weaving together stories of forecasting successes, the raid on Osama bin Laden's compound, and failures like the Bay of Pigs, and interviews with a range of high-level decision makers from David Petraeus to Robert Rubin, they show that good forecasting doesn't require powerful computers or arcane methods. It involves gathering evidence from a variety of sources, thinking probabilistically, working in teams, keeping score, and being willing to admit error and change course. *Superforecasting* offers the first demonstrably effective way to improve our ability to predict the future, whether in business, finance, politics, international affairs, or daily life, and is destined to become a modern classic. Available in a variety of formats, this summary is aimed for those who want to capture the gist of the book but don't have the current time to devour all 352 pages.
