

Chapter 1: Psychology and Scientific Thinking

September 8, 2014

What is psychology?

Psychology: the scientific study of the mind, brain and behaviour

The mind is your brain at work while your brain is just an organ.

There are **levels of analysis** which are “rungs” that are biological (brain) at the lower levels and social (mind) at the higher levels. Psychology focuses on aspects of both because they are essential for a complete understanding.

Five challenges related to psychology are:

- Human behaviour is hard to predict (since it is **multiply determined** – caused by many factors)
- Psychological influences are rarely independent of each other (ex. causes of Anorexia such as perfectionism, issues with diet, pre-disposed idea of self image)
- People have **individual differences** – they vary in thinking, emotion, personality, EQ and IQ
- People mutually influence each other’s behaviour, causing **reciprocal determinism**
- Behaviour is shaped by culture, which causes broad generalizations about human nature to be **difficult** (ex. Western people focused on the main detail/individual, Easterners focused on peripherals/group)

Scientists can take the **emic** (insider and native perspective) or **etic** (outsider and observational) approach when studying cultures but both have pros/cons. Emic shows a more personal level while etic is broader and may impose other perspectives. For example, emic focuses on personality traits in an isolated tribe but etic might attribute them to Western terms (“shy”, “introvert”, etc.).

Why can’t we always trust common sense?

We believe contradicting proverbs which makes no sense. We also contradict old adages such as “safety in numbers” since more people present usually means less people actually help. We think that we know a lot about psychology but we really don’t.

Naïve realism – believing that we see the world precisely as it is (“seeing is believing”) – is also an issue. Trusting our perceptions is good in daily life (ex. Avoiding an accident) but sometimes we are wrong (ex. Earth is not flat, Sun doesn’t revolve around Earth). “Believing is seeing” is more accurate since we are biased.

Some common sense (judging if someone is trustworthy, hypotheses, happy = productive) is accurate, but it should only be used sometimes, or combined with science.

Psychology as a science

Understanding and Conducting Research Emanuel J. Mason, William J. Bramble, 1989

Motivating Students to Learn Jere E. Brophy, 2004. Written specifically for teachers, this book offers a wealth of research-based principles for motivating students to learn within the realities of a classroom learning community. Its focus on motivational principles rather than motivational theorists or theories leads naturally into discussions of specific classroom strategies. Throughout the book, the author focuses on and expertly synthesizes that portion of the motivational literature that is most relevant to teachers. Key features of this expanded new edition include Focus on School and Classroom Realities. The selection and treatment of motivational principles and strategies is constantly tied to the realities of schools, e.g., curriculum goals and classrooms, e.g., student differences, classroom dynamics. Integrates Intrinsic and Extrinsic Principles. The author employs an eclectic approach to motivation that shows how to effectively integrate the use of intrinsic and extrinsic strategies. Covers Expectancy and Value-Related Topics. Full coverage is given to both the expectancy aspects of motivation (attributions, efficacy, perceptions, expectations, confidence, etc.) and to value-related topics (relevance, meaningfulness, application potential, and their associated teacher-student dynamics). New Chapters: Two theories that have spurred much education-related motivational research in recent years, self-determination theory and achievement goal theory, have been given their own chapters. Focus on Individual Differences and Problem Learners. Guidelines are provided for adapting motivational principles to group and individual student differences and for doing repair work with students who have become discouraged or disaffected learners. Expanded Topical Coverage. Expanded coverage has been given to several emerging topics, including self-identity, concepts, cross-cultural comparisons, situational interest, stereotype threat, and the rediscovery of John Dewey's motivational ideas. Improved Pedagogy. Chapter and section introductions and summaries provide an unusual degree of continuity across the book, and its second-person writing style is more reader-friendly than most textbooks. New to this edition are reflection questions at the end of each chapter. This book is appropriate for any course in the undergraduate

or graduate teacher education curriculum that is devoted wholly or partly to the study of student motivation

The Elusive Synthesis: Aesthetics and Science A.I. Tauber, 2012-12-06 The tension between art and science may be traced back to the Greeks What became natural philosophy and later science has traditionally been posed as a fundamental alternative to poetry and art It is a theme that has commanded central attention in Western thought as it captures the ancient conflict of Apollo and Dionysus over what deserves to order our thought and serve as the aspiration of our cultural efforts The modern schism between art and science was again clearly articulated in the Romantic period and seemingly grew to a crescendo fifty years ago as a result of the debate concerning atomic power The discussion has not abated in the physical sciences and in fact has dramatically expanded most prominently into the domains of ecology and medicine Issues concerning the role of science in modern society although heavily political must be regarded at heart as deeply embedded in our cultural values Although each generation addresses them anew the philosophical problems which lay at the foundation of these fundamental concerns always appear fresh and difficult This anthology of original essays considers how science might have a greater commonality with art than was perhaps realized in a more positivist era The contributors are concerned with how the aesthetic participates in science both as a factor in constructing theory and influencing practice The collection is thus no less than a spectrum of how Beauty and Science might be regarded through the same prism *Palgrave's Dictionary of Political Economy* Robert Harry Inglis Palgrave, 1926 [Researching Child-Dog Relationships and Narratives in the Classroom](#) Donna Carlyle, 2024-02-13 This interdisciplinary book explores posthuman and psychological approaches to childhood education and well being by examining animal assisted education using qualitative approaches to understand the nuanced mechanisms which unfold in child dog interactions Mapping the lives of children in a primary school setting and the relationships they share with their school and classroom dog Ted the book provides insight into everyday child dog encounters the importance of touch in middle childhood and how embodiment offers a corporeal and compassionate means to understand the rhythm and musicality in interspecies communication In doing so the book uses the unique orientation of rhythm analysis a posthuman critical theory and new materialist orientation in multispecies empathic childhood flourishing in the future Reflecting contemporary interest in child dog companionship picture books children s flourishing and children s
