

## Deleting a Resource

To delete an existing resource, invoke the static method `delete()` on the resource class, by passing the ID of the resource to be removed, as an argument.

The following sample code deletes a NetScaler instance with ID 1:

```
obj = ns()
obj.id = "123456a"
ns.delete(nitroservice, obj)
```

## Bulk Operations

You can query or change multiple resources simultaneously and thus minimize network traffic. For example, you can add multiple NetScaler appliances in the same operation.

Each resource class has methods that take an array of resources for adding, updating, and removing resources. To perform a bulk operation, specify the details of each operation locally and then send the details at one time to the server.

To account for the failure of some operations within the bulk operation, NITRO allows you to configure one of the following behaviors:

- **Exit.** When the first error is encountered, the execution stops. The commands that were executed before the error are committed.
- **Continue.** All the commands in the list are executed even if some commands fail.

**Note:** You must configure the required behavior while establishing a connection with the appliance, by setting the `onerror` param in the `nitro_service()` method.

The following sample code adds two NetScalers in one operation:

```
newns=[]
newns = [ns() for _ in range(2)]

# Specify details of first NetScaler
newns[0].name = "ns_instance1"
newns[0].ip_address = "10.70.136.5"
newns[0].netmask = "255.255.255.0"
newns[0].gateway = "10.70.136.1"

# Specify details of second NetScaler
newns[1].name = "ns_instance2"
newns[1].ip_address = "10.70.136.8"
newns[1].netmask = "255.255.255.0"
newns[1].gateway = "10.70.136.1"

# Upload the details of the NetScalers to the NITRO server
result = ns.add(nitroservice, newns)
```
