Dr. P.J.G. Long  
Department of Engineering  
University of Cambridge

Based on the Tutorial Guide to  
Matlab written by Dr. Paul Smith

September 2005

This document provides an introduction to computing using Octave. It will teach you how to use Octave to perform calculations, plot graphs, and write simple programs.

The close compatibility of the open-source Octave<sup>1</sup> package with MATLAB<sup>2</sup>, which is heavily used in industry and academia, gives the user the opportunity to learn the syntax and power of both packages where funding and licence restrictions prevent the use of commercial packages.

To maintain the ideal of learning both Octave and Matlab from this tutorial, the differences between Octave and Matlab have been highlighted and details of any modifications etc. required to run a function/program with Matlab described in footnotes. In a number of cases additional functions have had to be written or startup options set, these are included as default on the MDP<sup>3</sup> distribution and documented in an appendix.
